Under the leadership of chief executive Ray Noorda, NetWare became the dominant form of personal computer networking during the second half of the 1980s and first half of the 1990s. At its high point, NetWare had a 63 percent share of the market for network operating systems and by the early 1990s there were over half a million NetWare-based networks installed worldwide encompassing more than 50 million users. Novell... Guido van Rossum began working on Python in the late 1980s as a successor to the ABC programming language. Python 3.0, released in 2008, was a major revision not completely backward-compatible with earlier versions. Recent versions, such as Python 3.12, have added capabilities and keywords for typing (and more; e.g. increasing speed); helping with (optional) static typing. Currently only versions in the 3.x series are supported. A PL/I American National Standards Institute (ANSI) technical standard, X3.53-1976, was published in 1976.

Video games and Linux The Linux gaming community has a presence on the internet with users who attempt to run games that are not officially supported on Linux. Because fewer games natively support the Linux kernel than Windows, various software has been made to run Windows games, software, and programs, such as Wine, Cedega, DXVK, and Proton, and managers such as Lutris and PlayOnLinux. Linux gaming started largely as an extension of the already present Unix gaming scene Linux-based operating systems can be used for playing video games. who attempt to run games that are not officially supported on Linux

PL/I was written in PL/M. IBM delivered PL/I for OS/2 in PL/I (Programming Language One, pronounced and sometimes written PL/1) is a procedural, imperative computer programming language initially developed by IBM. It has been in continuous use by academic, commercial and industrial organizations since it was introduced in the 1960s. It is designed for scientific, engineering, business and system programming. Micro Focus implemented Open PL/I for Windows and UNIX/Linux systems, which they acquired from Liant

PL/I's main domains are data processing, numerical computation, scientific computing, and system programming. It supports recursion, structured programming, linked data structure handling, fixed-point, floating-point, complex, character string handling, and bit string handling. The language syntax is English-like and suited for describing... In public policy, a similar concept has been referred to as manufactured uncertainty, which involves casting doubt on academic findings, exaggerating their claimed imperfections. A manufactured controversy (sometimes shortened to manufactroversy) is a contrived disagreement, typically motivated by profit or ideology, designed to create public confusion concerning an issue about which there is no substantial academic dispute. As of 2021, the AT&T-derived Unix market is divided between four System V variants: IBM's AIX, Hewlett Packard Enterprise's HP-UX and Oracle's Solaris, plus the free-software illumos forked from OpenSolaris.
