Bipolar disorder The risk of. Fifth Edition (DSM-5) and the World Health Organization’s (WHO) International Statistical Classification of Diseases and Related Health Problems, 10th Edition Bipolar disorder (BD), previously known as manic depression, is a mental disorder characterized by periods of depression and periods of abnormally elevated mood that each last from days to weeks, and in some cases months. During periods of depression, the individual may experience crying, have a negative outlook on life, and demonstrate poor eye contact with others. During mania, an individual behaves or feels abnormally energetic, happy, or irritable, and they often make impulsive decisions with little regard for the consequences. If the elevated mood is severe or associated with psychosis, it is called mania; if it is less severe and does not significantly affect functioning, it is called hypomania. There is usually, but not always, a reduced need for sleep during manic phases d8183a58da
