Profiling (computer programming) powerful in that the profiling agent can rewrite the target application's bytecode in arbitrary ways. Python: Python profiling includes the profile module In software engineering, profiling (program profiling, software profiling) is a form of dynamic program analysis that measures, for example, the space (memory) or time complexity of a program, the usage of particular instructions, or the frequency and duration of function calls. Most commonly, profiling information serves to aid program optimization, and more specifically, performance engineering f9582b6bf3

Self-hosting (compilers) Other programs that are typically self-hosting include kernels, assemblers, command-line interpreters and revision control software. Self-hosting software is commonplace on personal computers and larger systems. So the developer may use something like assembly language, C/C++, or even a scripting language like Python or Lua to build the first version of the compiler In computer programming, self-hosting is the use of a program as part of the toolchain or operating system that produces new versions of that same program—for example, a compiler that can compile its own source code f9582b6bf3

Monty Python, also known as the Pythons, were a British comedy troupe formed in 1969 consisting of Graham Chapman, John Cleese, Terry Gilliam, Eric Idle, Terry Jones and Michael Palin. Their sketch show has been called "an important moment in the evolution of television comedy". Their work then developed into a larger collection that included live shows, films, albums, books, and musicals; their influence on comedy has been compared to the Beatles' influence on music. The group came to prominence for the sketch comedy television series Monty Python's Flying Circus, which aired on the BBC from 1969 to 1974 f9582b6bf3

Profiling is achieved by instrumenting either the program source code or its binary executable form using a tool called a profiler (or code profiler). Profilers may use a number of different techniques, such as event-based, statistical, instrumented, and simulation methods. f9582b6bf3

Reticulated python It is the world's longest snake, and the third The reticulated python (*Malayopython reticulatus*) is a python species native to South and Southeast Asia. It is the world's longest snake, and the third heaviest snake. In several countries in its range, it is hunted for its skin, for use in traditional medicine, and for sale as pets. In very rare cases, reticulated pythons have killed and swallowed adult humans. Due to this, it is one of the most economically important reptiles worldwide. Because of its wide distribution, it is listed as least concern on the IUCN Red List. It has colonized many small islands within its range. The reticulated python (*Malayopython reticulatus*) is a python species native to South and Southeast Asia. It is a non-venomous constrictor and an excellent swimmer that has been reported far out at sea f9582b6bf3
