Physiology of dinosaurs Recently, many new lines of evidence have been brought to bear on dinosaur physiology generally, including not only metabolic systems and thermoregulation, but on respiratory and cardiovascular systems as well. brought to bear on dinosaur physiology generally, including not only metabolic systems and thermoregulation, but on respiratory and cardiovascular systems The physiology of non-avian dinosaurs has historically been a controversial subject, particularly their thermoregulation 075992674f

Certified anesthesiologist assistant from 24 to 28 months with didactic and clinical instruction. All CAAs possess a baccalaureate degree, and complete an intensive didactic and clinical program at a postgraduate level. CAAs are trained in the delivery and maintenance of most types of anesthesia care as well as advanced patient monitoring techniques. This designation must be disambiguated from the Certified Clinical Anesthesia Assistant (CCAA) designation conferred by the Canadian Society of Respiratory Therapists. The goal of CAA education is to guide the transformation of student applicants into competent clinicians. CAAs are members of the anesthesia care team as described by the American Society of Anesthesiologists (ASA). Didactic training includes courses such as physiology, pharmacology, airway management, simulation Certified anesthesiologist assistants (CAAs) are master's degree level non-physician anesthesia care providers in North America 075992674f

Vagina Management of Sexual Dysfunction in Men and Women. It also channels menstrual flow, which occurs in humans and closely related primates as part of the menstrual cycle. The vaginal introitus is normally partly covered by a thin layer of mucosal tissue called the hymen. The vagina allows for copulation and birth. In humans, it extends from the vulval vestibule to the cervix (neck of the uterus). : vaginas or vaginae) is the elastic, muscular reproductive organ of the female genital tract. Springer New In mammals and other animals, the vagina (pl. Sexual Response: Anatomy and Physiology of Sexual Desire, Arousal, and Orgasm in Women" 075992674f

Vulva : vulvas or vulvae) comprises mostly external, visible structures of the female genitalia leading into the interior of the female reproductive tract. While the vagina is a separate part of the anatomy, it has often been used synonymously with vulva. (January 2013). For humans, it includes the mons pubis, labia majora, labia minora, clitoris, vestibule, urinary meatus, vaginal introitus, hymen, and openings of the vestibular glands (Bartholin's and Skene's). Other muscles of the urogenital triangle also give support. Pelvic floor muscles support the structures of the vulva. The folds of the outer and inner labia provide a double layer of protection for the vagina (which leads to the uterus). The main symptoms are numbness and tingling of the thumb, index finger, middle finger, and the thumb side of the ring finger, as well as pain in the hand and fingers. Symptoms are typically most troublesome at night. Many people sleep with their wrists bent, and the ensuing symptoms may lead to awakening. People wake less often at night if they wear a wrist splint. Untreated, and over years to decades, CTS causes... 075992674f During the early years of dinosaur paleontology, it was widely considered that they were sluggish, cumbersome, and sprawling cold-blooded lizards. However, with the discovery of much more complete skeletons in the western United States, starting in the 1870s, scientists made more informed interpretations of dinosaur biology and physiology. Edward Drinker Cope, opponent of Othniel Charles Marsh in the Bone Wars, propounded at least some dinosaurs as active and agile... 075992674f Medawar was the youngest child of a Lebanese father and a British mother, and was both a Brazilian and British citizen by birth. Advanced Placement Colleges and universities in the US and elsewhere may grant placement and course credit to students who obtain qualifying scores on the examinations. AP offers undergraduate university-level curricula and examinations to high school students. Finance AP Anatomy and Physiology In the announcement, the College Board additionally noted that "We plan to build out multiple career and technical education Advanced Placement (AP) is a program in the United States and Canada created by the College Board 075992674f

Bone pp. Barnes-Svarney PL, Svarney TE (2016). ISBN 978-1-57859-542-6 A bone is a rigid organ that constitutes part of the skeleton in most vertebrate animals. 90–91. They are lightweight yet strong and hard and serve multiple functions. The Handy Anatomy Answer Book: Includes Physiology. Bones come in a variety of shapes and sizes and have complex internal and external structures. Detroit: Visible Ink Press. S2CID 46340228. Bones protect the various other organs of the body, produce red and white blood cells, store minerals, provide structure and support for the body, and enable mobility 075992674f

Anthropometry An early tool of physical anthropology, it has been used for identification, for the purposes of understanding human physical variation, in paleoanthropology and in various attempts to correlate physical with racial and psychological traits. Since commonly used methods and approaches in analysing living standards were not helpful enough, the anthropometric history became very useful for historians in answering questions that interested them.

Anthropometry involves the systematic measurement of the physical properties of the human body, primarily dimensional descriptors of body size and shape. Allometry – Study of the relationship of body size to shape, anatomy, physiology, and behavior Anthropometric cosmetology – Medical practice to correct Anthropometry (, from Ancient Greek ἄνθρωπος (ánthrōpos) 'human' and μέτρον (métron) 'measure') refers to the measurement of the human individual 075992674f

Peter Medawar He is remembered for his wit both in person and in popular writings. He and Burnet shared the 1960 Nobel Prize in Physiology or Medicine "for discovery of acquired Sir Peter Brian Medawar (; 28 February 1915 – 2 October 1987) was a British biologist and writer, whose works on graft rejection and the discovery of acquired immune tolerance have been fundamental to the medical practice of tissue and organ transplants. This became the foundation of tissue and organ transplantation. Richard Dawkins referred to him as "the wittiest of all scientific writers"; Stephen Jay Gould as "the cleverest man I have ever known". For his scientific works, he is regarded as the "father of transplantation" 075992674f

Bone tissue (osseous tissue), which is also called bone in the uncountable sense of that word, is hard tissue, a type of specialised connective tissue. It has a honeycomb-like matrix internally, which helps to give the bone rigidity. Bone tissue is made up of different types of bone cells. Osteoblasts and osteocytes are involved in the formation and mineralisation of bone; osteoclasts... 075992674f Today, anthropometry plays an important role in industrial... 075992674f

Carpal tunnel syndrome CTS can affect both wrists when it is known as bilateral CTS. With rheumatoid arthritis, the enlarged synovial lining of the tendons causes compression. eventually causing a cascade of physiological changes in the nerve itself. There is a dose-responder curve such that greater and longer periods of pressure Carpal tunnel syndrome (CTS) is a nerve compression syndrome caused when the median nerve, in the carpal tunnel of the wrist, becomes compressed. After a wrist fracture, inflammation and bone displacement can compress the median nerve 075992674f

To accommodate smoother penetration of the vagina during sexual intercourse or other sexual activity, vaginal moisture increases during sexual arousal in human females and other female mammals. This increase in moisture provides vaginal lubrication, which reduces friction. The texture of the vaginal walls creates... 075992674f Blood supply to the vulva comes from the three pudendal arteries. The internal pudendal veins... 075992674f

IB Group 4 subjects Genetics Ecology and evolution Health and human physiology with 30 hours of instruction on two options from: Human nutrition and health Physiology of exercise The Group 4: Sciences subjects of the International Baccalaureate Diploma Programme comprise the main scientific emphasis of this internationally recognized high school programme. Astronomy also exists as a school-based syllabus. There are also two SL only courses: a transdisciplinary course, Environmental Systems and Societies, that satisfies Diploma requirements for Groups 3 and 4, and Sports, Exercise and Health Science (previously, for last examinations in 2013, a pilot subject). Students taking two or more Group. They consist of seven courses, six of which are offered at both the Standard Level (SL) and Higher Level (HL): Chemistry, Biology, Physics, Design Technology, and, as of August 2024, Computer Science (previously a group 5 elective course) is offered as part of the Group 4 subjects 075992674f

The AP curriculum for each of the various subjects is created for the College Board by a panel of experts and college-level educators in that academic discipline. For a high school course to have the designation as offering an AP course, the course must be audited by the College Board to ascertain that it satisfies the AP curriculum as specified in the Board's Course and Examination Description (CED). If the course is approved, the school may use the AP designation... 075992674f
