(There are several approaches to asset pricing that attempt to price assets by modelling the stochastic properties of the moments Modern portfolio theory (MPT), or mean-variance analysis, is a mathematical framework for assembling a portfolio of assets such that the expected return is maximized for a given level of risk. It is a formalization and extension of diversification in investing, the idea that owning different kinds of financial assets is less risky than owning only one type. Its key insight is that an asset's risk and return should not be assessed by itself, but by how it contributes to a portfolio's overall risk and return. observed and are therefore given. The variance of return (or its transformation, the standard deviation) is used as a measure of risk, because it is tractable when assets are combined into portfolios

Lattice model (finance) For interest rate derivatives lattices are additionally useful in that they address many of the issues encountered with continuous models, such as pull to par. A continuous model, on the other hand, such as the standard Black–Scholes one, would only allow for the valuation of European options, where exercise is limited to the option's maturity date. Carbon dioxide, the primary gas driving global warming, has increased in concentration by about 50% since the pre-industrial era to levels not seen for millions of years. Climate change in a broader sense also includes previous long-term changes to Earth's climate. Carbon can be priced

with Present-day climate change includes both global warming—the ongoing increase in global average temperature—and its wider effects on Earth's climate system. Fossil fuel use, deforestation, and some agricultural and industrial practices release greenhouse gases. The current rise in global temperatures is driven by human activities, especially fossil fuel burning since the Industrial Revolution. and laws are being used to reduce emissions. These gases absorb some of the heat that the Earth radiates after it warms from sunlight, warming the lower atmosphere d6d26f6a98
