Falsifiability paradigms. A hypothesis is falsifiable if it belongs to a language or logical structure capable of describing an empirical observation that contradicts it. He proposed falsifiability as the cornerstone solution to both the problem of induction and the problem of demarcation. Later, he abandoned this research and adopted rules that require judgment Falsifiability () or refutability is a standard of evaluation of scientific theories and hypotheses. It was introduced by the philosopher of science Karl Popper in his book *The Logic of Scientific Discovery* (1934). Lakatos removed the "metaphysical" part and sought rigorous inductive rules. Popper emphasized that the contradiction is to be found in the logical structure alone, without having to worry about methodological considerations external to this structure e7badef50a
