Because it is sold as separate components which are not themselves explosive, it is not regulated by the U.S. Bureau of Alcohol, Tobacco, Firearms, and Explosives (ATF), and can be transported and sold in many places without the legal restrictions that apply to explosives; however, a number of U.S. states have restricted its use. The term Tannerite is often used to refer to the mixture itself, and other reactive targets and combination explosives are often generically referred to as Tannerite. 2f090b53f1

Tannerite org - Tannerite is a brand of binary explosive targets used for firearms practice and sold in kit form. 11". The targets comprise a combination of oxidizers and a fuel, primarily aluminium powder, that is supplied as two separate components that are mixed by the user. The combination is relatively stable when subjected to forces less severe than a high-velocity bullet impact. A hammer blow, the product being dropped, or impact from a low-velocity bullet or shotgun blast will not initiate a reaction. It is also designed to be non-flammable (the reaction cannot be triggered by a burning fuse or electricity), although its explosion can ignite flammable material.
