Schizotypal personality disorder In the International Classification of Diseases, the latest edition of which is the ICD-11, schizotypal disorder is not classified as a personality disorder, but among psychotic disorders. PMID 30503214. American Schizotypal personality disorder (StPD or SPD), also known as schizotypal disorder, is a mental disorder characterized by thought disorder, paranoia, a characteristic form of social anxiety, derealization, transient psychosis, and unconventional beliefs. "The Pathophysiology of Schizophrenia Disorders: Perspectives From the Spectrum". The Diagnostic and Statistical Manual of Mental Disorders, Fifth Edition (DSM-5) classifies StPD as a personality disorder belonging to cluster A, which is a grouping of personality disorders exhibiting traits such as odd and eccentric

behavior. S2CID 53873865. Siever LJ, Davis KL (2004-03-01) a568d4548f

Polio Gawne AC, Halstead LS (1995). ISBN 978-0-7660-1592-0. A less common symptom is permanent paralysis, and possible death in extreme cases. Approximately 75% of cases are asymptomatic; mild symptoms which can occur include sore throat and fever; in a proportion of cases more severe symptoms develop such as headache, neck stiffness, and paresthesia. "Post-polio syndrome: pathophysiology and clinical management". These symptoms usually pass within one or two weeks. Years after recovery, post-polio syndrome may occur,

with a slow development of muscle weakness similar to what the person had during the initial infection. Critical Review in Physical Medicine and Poliomyelitis (POH-lee-oh-MY-ə-LY-tiss), commonly shortened to polio, is an infectious disease caused by the poliovirus a568d4548f

Schizoid personality disorder The pathophysiology of SzPD remains unclear. Genetic relationships with people who have Schizoid personality disorder (, often abbreviated as SzPD or ScPD) is a personality disorder characterized by a lack of interest in social relationships, a tendency toward a solitary or sheltered lifestyle, secretiveness, emotional coldness, detachment, and apathy. Affected individuals may be unable to form intimate attachments to others and simultaneously possess a rich and elaborate but exclusively internal fantasy world. Other associated features include stilted speech, a lack of deriving enjoyment from most activities, feeling as though one is an "observer" rather than a participant in life, an inability to

tolerate emotional expectations of others, apparent indifference when praised or criticized, being on the asexual spectrum, and idiosyncratic moral or political beliefs. methodologically rigorous research had found the heritability rate to be 29% a568d4548f

Pulmonary embolism Signs of a PE include low blood oxygen levels, rapid breathing, rapid heart rate, and sometimes a mild fever. Symptoms of a PE may include shortness of breath, chest pain particularly upon breathing in, and coughing up blood. Symptoms of a blood clot in the leg may also be present, such as a red, warm, swollen, and painful leg. Friedman OA, Tripathi N, Horowitz JM (June 2018). Severe cases can lead to passing out, abnormally low blood pressure, obstructive shock, and sudden death. "Epidemiology, Pathophysiology, and Natural History of Pulmonary Embolism". Seminars in Interventional Pulmonary embolism (PE) is a blockage of an artery in the lungs by a substance that has moved from elsewhere in the body through the bloodstream (embolism) a568d4548f

Generalized anxiety disorder Worry often interferes with daily functioning. The
pathophysiology of GAD is an active and ongoing area of research, often involving the
Generalized anxiety disorder (GAD) is an anxiety disorder characterized by excessive,
uncontrollable, and often irrational worry about events or activities. Individuals with GAD are
often overly concerned about everyday matters such as health, finances, death, family,
relationship concerns, or work difficulties. Symptoms may include excessive worry,

restlessness, trouble sleeping, exhaustion, irritability, sweating, and trembling. social media addictive behaviors all correlated with anxiety a568d4548f

For a listing of ongoing discussions, see the dashboard. a568d4548f The parents of the affected individual are usually genetically normal. The incidence of the syndrome increases with the age of the mother, from less than 0.1% for 20-year-old mothers to 3% for those of age 45. It is believed to occur by chance, with no known behavioral activity or environmental factor that changes the probability. Three different genetic forms have been identified. The most common, trisomy 21, involves an extra copy of chromosome 21 in all cells. The extra chromosome is provided at conception... a568d4548f People with this disorder often feel pronounced discomfort in forming and maintaining social connections with other... a568d4548f edit a568d4548f view a568d4548f 4 February > a568d4548f history a568d4548f
