Biology and sexual orientation doi:10 The relationship between biology and sexual orientation is a subject of ongoing research. 41 (5). "Emerging insights into the genetics and evolution of human same-sex sexual behavior". Trends in Genetics. While scientists do not know the exact cause of sexual orientation, they theorize that it is caused by a complex interplay of genetic, hormonal, and environmental influences. Cell Press: 402–411. However, evidence is weak for hypotheses that the postnatal social

Biological theories for explaining the causes of sexual orientation are favored by scientists. These factors, which may be related to the development of a sexual orientation, include genes, the early uterine environment (such as prenatal hormones), and brain structure. While the evolutionary explanation for heterosexuality in organisms that reproduce sexually is straightforwardly understood to be a psychological... 9d4aa13ce5 Article is not notable.
