Research in his Materials Theory Group is fundamentally based on computer simulations of electronic motion governed by quantum physics and resulting electron-mediated inter-atomic interactions which are responsible for multi-scale behaviour of materials. Deriving material-specific information on chemical bonding, microscopic degrees of freedom and their couplings that are essential to the specific properties of a material, they develop a model that is used to achieve fundamental understanding of a material in terms of its atomic structure and electronic structure. The goal of their theoretical analysis is to derive material-specific... f44daf1aee
