Mathematical truth In early times, the meaning was restricted to information about states, particularly demographics such as population. This was later extended to include all collections of information of all types, and later still it was extended to include the analysis and interpretation of such data. In modern terms, "statistics" means both sets of collected information, as in national accounts and temperature record, and analytical work which requires statistical inference. Statistical activities are often associated with models expressed using probabilities, hence the connection with probability theory. The large requirements of data processing have made statistics...

Philosophy of mathematics Central questions posed include whether or not mathematical objects are purely abstract entities or are in some way concrete, and in what the relationship such objects have with physical reality consists. no non-experienced mathematical truths (L. Festivals like Easter and Christmas are marked as public holidays; the Gregorian Calendar has been adopted internationally as the civil calendar; and the calendar itself is measured from an estimation of the date of Jesus's birth

Reality: The question is whether mathematics is a pure product of human mind or whether it has some reality by itself.

List of Jewish mathematicians differential geometry Abram Besicovitch (1891–1970), mathematician (Karaite) Paul Biran (born 1969), symplectic and algebraic geometry; Erdős Prize (2006) This list of Jewish mathematicians includes mathematicians and statisticians who are or were verifiably Jewish or of Jewish descent. Jewish mathematicians made major contributions throughout the 20th century and into the 21st, as is evidenced by their high representation among the winners of major mathematics awards: 27% for the Fields Medal, 30% for the Abel Prize, and 40% for the Wolf Prize. In 1933, when the Nazis rose to power in Germany, one-third of all mathematics professors in the country were Jewish, while Jews constituted less than one percent of the population

Science and the Catholic Church However, the relationship has not been without conflict. Some historians of science, such as Pierre Duhem, attribute the origins of modern science to medieval Catholic scholars like John Buridan, Nicole Oresme, and Roger Bacon. Many members of the clergy have actively contributed to scientific research. Historically, the Catholic Church has served as a major patron of the sciences, playing an influential role in the establishment and funding of educational institutions, universities, and hospitals. Critics, including proponents of the conflict thesis, point to historical and contemporary tensions between the Church and science, such as the trial of Galileo, as examples of.
