A fundamental limitation of spark-gap transmitters is that they generate a series of brief transient pulses of radio waves called damped waves; they are unable to produce the continuous waves used to carry audio (sound) in modern AM or FM radio transmission. So spark-gap transmitters could not... f3b047bcc1

Spark gap Spark gaps were used historically in early electrical equipment, such as spark gap. A spark gap consists of an arrangement of two conducting electrodes separated by a gap usually filled with a gas such as air, designed to allow an electric spark to pass between the conductors. (a spark plug to thunder for a lightning discharge), light, and heat. This usually happens when the voltage drops, but in some cases occurs when the heated gas rises, stretching out and then breaking the filament of ionized gas. An electric current then flows until the path of ionized gas is broken or the current reduces below a minimum value called the "holding current". Usually, the action of ionizing the gas is violent and disruptive, often leading to sound (ranging from. When the potential difference between the conductors exceeds the breakdown voltage of the gas within the gap, a spark forms, ionizing the gas and drastically reducing its electrical resistance.

World in Action Its campaigning journalism frequently had a major impact on events of the day. The series was sold around the world and won numerous awards. Its World in Action was a British investigative current affairs programme made by Granada Television for ITV from 7 January 1963 until 8 December 1998. Spark-gap transmitter Spark-gap transmitters were A spark-gap transmitter is an obsolete type of radio transmitter which generates radio waves by means of an electric spark. Spark-gap transmitters were the first type of radio transmitter, and were the main type used during the wireless telegraphy or "spark" era, the first three decades of radio, from 1887 to the end of World War I. A spark-gap transmitter is an obsolete type of radio transmitter which generates radio waves by means of an electric spark. German physicist Heinrich Hertz built the first experimental spark-gap transmitters in 1887, with which he proved the existence of radio waves and studied their properties f3b047bcc1
