The first fascist movements emerged in Italy during World War I before spreading to other European countries, most notably Germany. Fascism also had adherents outside of Europe. Fascists saw World War I... 82c5a06345 The scientific theory of evolution by natural selection was conceived independently by two British naturalists, Charles Darwin and Alfred Russel Wallace, in the mid-19th century as an explanation for why organisms are adapted to their physical and biological environments. The theory was first set out in detail in Darwin's book *On the Origin of Species*. Evolution by... 82c5a06345 Download the file `enwiki-YYYYMMDD-pages-articles.xml.bz2` from the most recent dump. Evolution Ciccarelli, Francesca D. PMID 16339373. It occurs when evolutionary processes such as natural selection and genetic drift act on genetic variation, resulting in certain characteristics becoming more or less common within a population over successive generations. 1. 3737405. 1101/gr. ISSN 1088-9051. doi:10. 1. The process of evolution has given rise to biodiversity at every level of biological organisation. 9212. ; Doerks, Tobias; von Mering, Christian; et al. In 2015, possible "remains of biotic life" were found in 4.1 billion-year-old rocks in Western Australia. Introduction to evolution Genetic changes include mutations, which are caused by damage or replication errors in organisms' DNA. Ciccarelli, Francesca D. (March 3 In biology, evolution is the process of change in all forms of life over generations, and evolutionary biology is the study of how evolution occurs. Retrieved 2015-01-10. Cruz, CA: University of California, Santa Cruz. As the genetic variation of a population drifts randomly over generations, natural selection gradually leads traits to become more or less common based on the relative reproductive success of organisms with those traits. Biological populations evolve through genetic changes that correspond to changes in the organisms' observable traits. ; Doerks, Tobias; von Mering, Christian; et al 82c5a06345
