Anaphylaxis "Anaphylaxis: guidelines from the European Academy of Allergy and Clinical Immunology" Anaphylaxis (Greek: ana- 'up' + phylaxis 'guarding') is a serious, potentially fatal allergic reaction and medical emergency that is rapid in onset and requires immediate medical attention regardless of the availability of on-site treatments while not under medical care. EAACI Food Allergy and Anaphylaxis Guidelines Group (August 2014). It typically causes more than one of the following: an itchy rash, throat closing due to swelling that can obstruct or stop breathing; severe tongue swelling that can also interfere with or stop breathing; shortness of breath, vomiting, lightheadedness, loss of consciousness, low blood pressure, and medical shock da8d9e6799

Testing measures the effects and interactions of the levels of packaging, the package contents, external forces, and end-use. da8d9e6799 Testing can be a qualitative or quantitative procedure. Package testing is often a physical test. With some types of packaging such as food and pharmaceuticals, chemical tests are conducted to determine suitability... da8d9e6799

Noise pollution The source of outdoor noise worldwide is mainly caused by machines, transport and propagation systems. incidence of coronary artery disease.), lawn care maintenance, construction, electrical generators, wind turbines, explosions, and people. In animals, noise can increase the risk of death by altering predator or prey detection and avoidance, interfere Noise pollution, or sound pollution, is the propagation of noise or sound with potential harmful effects on humans and animals. Poor urban planning may give rise to noise disintegration or pollution. Some of the main sources of noise in residential areas include loud music, transportation (traffic, rail, airplanes, etc. Side-by-side industrial and residential buildings can result in noise pollution in the residential areas da8d9e6799

Hives frequently occur following an infection or as a result of an allergic reaction such as to medication, insect bites, or food. Psychological stress, cold temperature, or vibration may also be a trigger. In half of cases the cause remains unknown. Risk factors include having conditions such as hay fever or asthma. Diagnosis is typically based on appearance. Patch testing may be useful...
da8d9e6799 Fatigue can be a symptom of a medical problem, but more commonly it is a normal physiological reaction to exertion, lack of sleep, boredom, changes to sleep-wake schedules (including jet lag), or stress. da8d9e6799

Hoarse voice A hoarse voice can be associated with a feeling of unease or scratchiness in the throat. 0 2. Cheering at sporting events, speaking loudly in noisy environments, talking for too long without resting one's voice, singing loudly, or speaking with a voice that is too high or too low can also cause temporary hoarseness. It may be caused by laryngitis, which in turn may be caused by an upper respiratory infection, a cold, or allergies. A variety of different causes, which result in abnormal vibrations of the vocal folds, can cause dysphonia. 2%), and aging (2%). A number of other causes for losing one's voice exist, and treatment is generally by resting the voice and treating the underlying.

conditions (2. These causes - A hoarse voice, also known as dysphonia or hoarseness, is when the voice involuntarily sounds breathy, raspy, or strained, or is softer in volume or lower in pitch. Hoarseness is often a symptom of problems in the vocal folds of the larynx da8d9e6799

Vehicle safety technology Notable examples of VST include geo-fencing capabilities, remote speed sensing, theft deterrence, damage mitigation, vehicle-to-vehicle communication, and car-to-computer communication devices which use GPS tracking. The term encompasses a broad umbrella of projects and devices within the automotive world. and Pedestrian Emergency Braking. These collision avoidance technologies detect vehicles in front of the car and automatically brake if a crash is detected Vehicle safety technology (VST) in the automotive industry refers to the special technology developed to ensure the safety and security of automobiles and their passengers da8d9e6799

Examples of VST were first implemented in the 20th century, when they were introduced by the automobile industry in response to legislators' efforts to reduce the number of road accidents. Early examples of VST included safety glass, four-

Effects of fatigue on safety Many of the exogenous contributors merit further Fatigue is a major safety concern in many fields, but especially in transportation, because fatigue can result in disastrous accidents. Fatigue is considered an internal precondition for unsafe acts because it negatively affects the human operator's internal state. Research has generally focused on pilots, truck drivers, and shift workers. in-flight, vehicle noise, and vehicle vibration/acceleration (which contributes to the sopite syndrome) da8d9e6799

Thermodynamically, the process fluid transfers heat to the thermowell wall, which in turn transfers heat to the sensor. Since more mass is present with a sensor-well assembly than with a probe directly immersed into the fluid, the sensor's response to changes in temperature is slowed by the addition of the well. Wireless device radiation and health Since at least the 1990s, scientists have researched whether the now-ubiquitous radiation associated with mobile phone antennas or cell phone towers is affecting human health. These guidelines only take into account thermal The antennas contained in mobile phones, including smartphones, emit radiofrequency (RF) radiation (non-ionising radiation such as

microwaves); the parts of the head or body nearest to the antenna can absorb this energy and convert it to heat or to synchronised molecular vibrations (the term 'heat', properly applies only to disordered molecular motion). Mobile phone networks use various bands of RF radiation, some of which overlap with the microwave range. Other digital wireless systems, such as data communication networks, produce similar radiation. limit the power levels of wireless devices and it is uncommon for wireless devices to exceed the guidelines da8d9e6799

Thermowell A temperature sensor, such as a thermometer, thermocouple, or resistance temperature detector, is inserted in the open end of the tube, which is usually in the open air outside the piping or vessel and any thermal insulation. A thermowell consists of a tube closed at one end and mounted on the wall of the piping or vessel within which the fluid of interest flows. Report (2007) "Extension and update of the guidelines for the avoidance of vibration induced fatigue of process pipework, Intrusive Element Assessment", Energy Thermowells are cylindrical fittings used to protect temperature sensors installed to monitor industrial processes
