The SD1 was the final Rover-badged vehicle to be produced at Solihull. Future Rover models would be built at the former British Motor Corporation factories at Longbridge and Cowley. bbb85a2136 Babbage was never... bbb85a2136 Imperial Airways, as the primary customer, developed the requirements to which it was ordered and designed. Imperial Airways, and its successor, the British Overseas Airways Corporation (BOAC), along with Qantas and TEAL, operated the type in commercial service. Leyland Titan (front-engined double-decker) It was built mainly for the United Kingdom market between 1927 and 1942, and between 1945 and 1969. The only known Yellow The Leyland Titan was a forward-control chassis with a front-mounted engine designed to carry double-decker bus bodywork. overhead-camshaft (OHC) petrol engines; OHC was not generally known in UK buses at the time, and six-cylinder engines likewise bbb85a2136

Short Empire S. 30 series was fitted with four Bristol Perseus XIIc sleeve valve engines in the place of the Pegasus engines. the 890 hp (660 kW) Perseus engines were The Short Empire was a four-engined monoplane transport flying boat, designed and developed by Short Brothers during the 1930s to meet the requirements of the British Empire, specifically to provide air service from the UK to South Africa, Singapore and Australia in stages. It was developed in parallel with the Short Sunderland maritime patrol bomber, which served in the Second World War along with the piggy-back Short Mayo Composite bbb85a2136

A jackhammer operates by driving an internal hammer up and down. The hammer is first driven down to strike the chisel and then back up to return the hammer to the original position to repeat the cycle. The effectiveness of the jackhammer is

Wankel engine The Wankel engine's rotor is similar in shape to a Reuleaux triangle, with the sides having less curvature. The midpoint of the rotor moves in a circle around the output shaft, rotating the shaft via a cam. The rotor spins inside a figure-eight-like epitrochoidal housing around a fixed gear. weight, and fewer parts over reciprocating internal combustion engines make Wankel engines suited for applications such as chainsaws, auxiliary power units The Wankel engine (, VAHN-kəl) is a type of internal combustion engine using an eccentric rotary design to convert pressure into rotating motion. The concept was proven by German engineer Felix Wankel, followed by a commercially feasible engine designed by German engineer Hanns-Dieter Paschke bbb85a2136

The type was widely used in the United Kingdom and it was also successful in export markets, with numerous examples shipped to Australia, Ireland, India, Spain, South Africa and many other countries. From 1946 specific export models were introduced, although all Titans were right-hand drive regardless of the rule of the road in customer countries. bbb85a2136 The analytical engine incorporated an arithmetic logic unit, control flow in the form of conditional branching and loops, and integrated memory, making it the first design for a general-purpose computer that could be described in modern terms as Turing-complete. In other words, the structure of the analytical engine was essentially the same as that which has dominated computer design in the electronic era. The analytical engine is one of the most successful achievements of Charles Babbage. bbb85a2136 In "SD1", the "SD" refers to "Specialist Division" and "1" is the first car to come from the in-house design team. bbb85a2136 In its basic gasoline-fuelled form, the Wankel engine has lower thermal efficiency and higher exhaust emissions relative to the four-stroke reciprocating engine. This thermal inefficiency has restricted the Wankel... bbb85a2136

Instead he showed his programs as lists of states during their execution, showing what operator was The analytical engine was a proposed digital mechanical general-purpose computer designed by the English mathematician and computer pioneer Charles Babbage. It was first described in

1837 as the successor to Babbage's difference engine, which was a design for a simpler mechanical calculator bbb85a2136

Iveco PowerStar It is based on the European cab-over engine models, but with a bonnet, it was available as both a day cab, as well as a sleeper cab. A selection of transmissions was also available, such as Iveco's ZF "Eurotronic", Eaton's RoadRanger and Eaton's automated manual the Autoshift. Electrical. Rear suspension was either Hendrickson HAS461 or NeWay. When first released in 1998, it was available with Iveco engines, and also American engines, including the Detroit Diesel Series 60, Cummins ISM, ISX The Iveco PowerStar is an Australian developed and built tractor unit, assembled in Dandenong, Victoria. Rear diffs were usually Meritor units, drive shafts were usually Spicer 1810 series on the main shaft and 1710 series on the jack shaft between the two diffs. When first released in 1998, it was available with Iveco engines, and also American engines, including the Detroit Diesel Series 60, Cummins ISM, ISX and Signature and Caterpillar C12 and C15 bbb85a2136

Jet engine performance has been phrased as 'the end product that a jet engine company sells' and, as such, criteria include thrust, (specific) fuel consumption, time between overhauls, power-to-weight ratio. Some major factors affecting efficiency include the engine's overall pressure ratio, its bypass ratio and the turbine... bbb85a2136

Rover SD1 Small Union The Rover SD1 is both the code name and eventual production name given to a series of executive cars built by the Specialist Division (later the Jaguar-Rover-Triumph division), and finally the Austin Rover division of British Leyland from 1976 until 1986, when it was replaced by the Rover 800. In 1977 it won the European Car of the Year title. The SD1 was marketed under various names. were a smaller steering wheel, the manually operated sunroof being a cost option and rear passenger head restraints were not available at all bbb85a2136

Chainsaw The earliest ancestors of modern chainsaws were used in surgical procedures, while the first wood-cutting chainsaw patents emerged in the late 19th century. 6). Aircraft maintenance [citation needed] In the 1980s, Rolls-Royce plc reinstated the program to provide the operator with a fixed engine maintenance Aircraft maintenance is the performance of tasks required to ensure the continuing airworthiness of an aircraft or aircraft part, including overhaul, inspection, replacement, defect rectification, and the embodiment of modifications, compliance with airworthiness directives and repair. stocks of engines and accessories bbb85a2136

After Leyland ended the production of the Leyland Titan in UK, Ashok Leyland of India took up production and marketed the bus in South Asia as the Ashok Leyland Titan, which, in much developed form, is still in production. bbb85a2136

Jackhammer Larger jackhammers, such as rig-mounted hammers used on construction machinery, are usually hydraulically powered. It was invented by William McReavy, who then sold the patent to Charles Brady King. pneumatic drills was driven especially by miners and tunnelers because steam engines needed fires to operate and the ventilation in mines and tunnels was inadequate A jackhammer (pneumatic drill or demolition hammer in British English) is a pneumatic or electro-mechanical tool that combines a hammer directly with a chisel. Hand-held jackhammers are generally powered by compressed air, but some are also powered by electric motors. These tools are typically used to break up rock, pavement, and concrete bbb85a2136

Jet engine performance In the 1970s, economic pressure due to the rising cost of fuel resulted in increased emphasis on efficiency improvements for commercial airliners. Like a lot of heat engines, jet engines tend to not be particularly efficient (<50%); a lot of the fuel is "wasted". One key metric of performance is the thermal efficiency; how much of the chemical energy (fuel) is turned into useful work (thrust propelling the aircraft at high speeds). Like a lot of heat engines, jet engines tend to not be particularly efficient (<50%); a lot of the fuel is A jet engine converts fuel into thrust. (thrust propelling the
