

Bgp4 Inter Domain Routing In The Internet

BGP used for routing within an autonomous system is called Interior Border Gateway Protocol (iBGP). In contrast, the Internet application of the protocol is called Exterior Border Gateway Protocol (EBGP). 7d57f7a0a6

Border Gateway Protocol RFC 4271 allows BGP4 to Border Gateway Protocol (BGP) is a standardized exterior gateway protocol designed to exchange routing and reachability information among autonomous systems (AS) on the Internet. was the support for Classless Inter-Domain Routing (CIDR) and use of route aggregation to decrease the size of routing tables. BGP is classified as a path-

vector routing protocol, and it makes routing decisions based on paths, network policies, or rule-sets configured by a network administrator 7d57f7a0a6
