Entity-attribute-value model 0-incubating/docs/html/tutorials_and_users_guides/tutorials_and_users_guides An entity-attribute-value model (EAV) is a data model optimized for the space-efficient storage of sparse—or ad-hoc—property or data values, intended for situations where runtime usage patterns are arbitrary, subject to user variation, or otherwise unforeseeable using a fixed design. The use-case targets applications which offer a large or rich system of defined property types, which are in turn appropriate to a wide set of entities, but where typically only a small, specific selection of these are instantiated (or persisted) for a given entity. Therefore, this type of data model relates to the mathematical notion of a sparse matrix. url: http://uima.apache.org/downloads/releaseDocs/2.0-incubating/docs/html/tutorials_and_users_guides/tutorials_and_users_guides UIMA Tutorials and Users Guides 87313a405a
