Major processing tasks in an NLP system include: speech recognition, text classification, natural language understanding, and natural language generation.

The design of programming languages has been strongly influenced by computer architecture, with most imperative languages designed around the ubiquitous von Neumann architecture. While early programming languages were closely tied to the... Execution of a program requires an implementation. There are two main approaches for implementing a programming language – compilation, where programs are compiled ahead-of-time to machine code, and interpretation, where programs are directly executed. In addition to these two extremes, some implementations use hybrid approaches such as just-in-time compilation and bytecode interpreters.

It is one of five languages descended from Old West Norse spoken in the Middle Ages; the others include Norwegian, Icelandic, and the extinct Norn and Greenlandic Norse. Faroese and Icelandic, its closest extant relative, are not easily mutually intelligible in speech, but the written languages resemble each other quite closely, largely owing to Faroese's etymological orthography.
