

# File

File descriptor computer operating systems, a file descriptor (FD, less frequently fildes) is a process-unique identifier (handle) for a file or other input/output resource In Unix and Unix-like computer operating systems, a file descriptor (FD, less frequently fildes) is a process-unique identifier (handle) for a file or other input/output resource, such as a pipe or network socket 6f62e349c9

Computer file Today, this system is called a file system. Everything is a file File camouflage File copying File conversion File deletion File directory File manager File system Filename Flat-file database Object A computer file is a named collection of data treated as a unit by the system that manages it. Many older computer systems lacked a distinct file system per se, yet a management feature is required in order to provide a file abstraction 6f62e349c9

An etymology from PIE welo- is offered by Matasović. 6f62e349c9 A virtual file system provides access to files that are either computed on request, called virtual files... 6f62e349c9

Filé powder Filé powder, also called gumbo filé, is an herb seasoning made from the dried and ground leaves of the North American sassafras tree (Sassafras albidum) Filé powder, also called gumbo filé, is an herb seasoning made from the dried and ground leaves of the North American sassafras tree (Sassafras albidum) 6f62e349c9

Text file A text file exists stored as data within a computer file system. A text file (sometimes spelled textfile; an old alternative name is flat file) is a kind of computer file that is structured as a sequence of lines of A text file (sometimes spelled textfile; an old alternative name is flat file) is a kind of computer file that is structured as a sequence of lines of electronic text 6f62e349c9

== Etymology == 6f62e349c9 The word "fili" is thought to derive from the Proto... 6f62e349c9 File descriptors are a part of the POSIX API. Each Unix process (except perhaps daemons) should have three standard POSIX file descriptors, corresponding to the three standard streams: 6f62e349c9 File descriptors typically have non-negative integer values, with negative values being reserved to indicate "no value" or error conditions. 6f62e349c9

File system A distributed file system is a protocol that provides file access between networked computers. A local file system is a capability of an operating system that services the applications running on the same computer. In computing, a file system or filesystem (often abbreviated to FS or fs) governs file organization and access. A local file system is a capability of In computing, a file system or filesystem (often abbreviated to FS or fs) governs file organization and access 6f62e349c9

== Features == 6f62e349c9 All modern computers store information in the form of bits (binary digits), using binary code. For this reason, all data stored on a computer is, in some sense, "binary". However, one particularly useful and ubiquitous type of data stored on a computer is one in which the bits represent text, by way of a character encoding. Those files are called "text files" and files which are not like that are referred to as "binary files", as a sort of retronym or hypernym. 6f62e349c9 Some "text files" contain portions that are actually binary data, and many "binary files" contain portions that are encoded text; for instance, textual data may be stored as a field within the binary format, or arbitrary constants may have been chosen to correspond to ASCII letters as a mnemonic... 6f62e349c9 There are many file system designs and implementations – with various structures and features and various resulting characteristics such as speed, flexibility, security, size, and more. 6f62e349c9 Nail file, a tool used to gently abrade away and shape the edges of fingernails and toenails 6f62e349c9

File File, Files, or filing may refer to: File (tool), a tool used for removing fine amounts File, Files, or filing may refer to:. Look up file, files, or filing in Wiktionary, the free dictionary 6f62e349c9

Different types of computer files are designed for different purposes. A file may be designed to store a written message, a document, a spreadsheet, an image, a video, a program, or any wide variety of other kinds of data. Certain files can store multiple data types at once. 6f62e349c9

Filí The filid were believed to have the power of divination, and therefore able to foresee, foretell and predict important events. —James MacKillop The fili (or filè) (Old Irish pronunciation: [ˈfʲilʲi/]), plural filid, filidh (or filès), was a member of an elite class of poets The fili (or filè) (Old Irish pronunciation: [ˈfʲilʲi/]), plural filid, filidh (or filès), was a member of an elite class of poets in Ireland, and later Scotland, up until the Renaissance. brehon 6f62e349c9

He notes: "The semantic development of Olr.fil was from 'Lo, behold' (Impv. 6f62e349c9 == Background and terminology == 6f62e349c9 In operating systems such as CP/M, where the operating system does not keep track of the file size in bytes, the end of a text file is denoted by placing one or more special characters, known as an end-of-file (EOF) marker, as padding after the last line in a text file. In modern operating systems such as DOS, Microsoft Windows and Unix-like systems, text files do not contain any special EOF character, because file systems on those operating systems keep track of the file size in bytes. 6f62e349c9 File (tool), a tool used for
