The Itanium architecture is based on explicit instruction-level parallelism, in which the compiler decides which instructions to execute in parallel. This contrasts with superscalar architectures, which depend on the processor to manage instruction dependencies at runtime. In all Itanium models, up to and including Tukwila, cores execute up to six instructions per cycle. 9d125678c0

The Curve lineup, like its higher-end Bold series, was known for its QWERTY keyboard, and typical BlackBerry messaging capabilities. The Curve series was less expensive and had plastic and glossy materials compared to the metal and leather in the Bold lineup, and has a different keyboard design, where the individual keys are more spaced, reminiscent of the older BlackBerry models. There were two basic form factors within the Curve line: the original, thicker form factor on the 8900, 8500 and 9300 series, and the slimmer form factor of the 9350 and 9380 model. 9d125678c0

Itanium The Itanium architecture originated at Hewlett-Packard (HP), and was later jointly developed

by HP and Intel. Early predictions were that IA-64 would expand to the lower-end servers, supplanting Xeon, and eventually penetrate into the personal computers, eventually to supplant reduced instruction set computing (RISC) and complex instruction set computing (CISC) architectures for all general-purpose applications. Launching in June 2001, Intel initially marketed the processors for enterprise servers and high-performance computing systems. In the concept phase, engineers said "we could run circles around PowerPC. we could kill the x86". Intel officially launched the Itanium 9700 series processor family on May 11, 2017.
