Most game discs, including first-party and third-party games, include system software updates, which allow systems that are not connected to the internet to still receive updates. The system menu will not start such games if their updates have not been installed, and would force users to install updates in order to play these games. Some games, such as online games like Super Smash Bros. Brawl and Mario Kart Wii, contain specific extra updates, such as the ability to receive Wii Message Board posts from game-specific addresses; therefore, these games would require an update to be installed before they could be played on a console for the first time.

A safety-related system (or sometimes safety-involved system) comprises everything (hardware, software, and human aspects) needed to perform one or more safety functions, in which failure would cause a significant increase in the safety risk for the people or environment involved. Safety-related systems are those that do not have full responsibility for controlling hazards such as loss of life, severe injury or severe environmental damage. The malfunction of a safety-involved system would only be that hazardous in conjunction with the failure of other systems or human error.
