G factor (psychometrics) The g factor typically accounts for 40 to 50 percent of the between-individual performance differences on a given cognitive test, and composite scores ("IQ scores") based on many tests are frequently regarded as estimates of individuals' standing on the g factor. It is a variable that summarizes positive correlations among different cognitive tasks, reflecting the assertion that an individual's performance on one type of cognitive task tends to be comparable to that person's performance on other kinds of cognitive tasks. The terms IQ, general intelligence, general cognitive ability, general mental ability, and simply intelligence are often used interchangeably to refer to this. of multiple intelligences and the triarchic theory of intelligence) lacked empirical support. Solomonoff's theory of inductive inference All computable theories which perfectly Solomonoff's theory of inductive inference proves that, under its common sense assumptions (axioms), the best possible scientific model is the shortest algorithm that generates the empirical data under consideration. In addition to the choice of data, other assumptions are that, to avoid the post-hoc fallacy, the programming language must be chosen prior to the data and that the environment being observed is generated by an unknown algorithm. In essence, Solomonoff. It is a mathematically formalized combination of Occam's razor and the Principle of Multiple Explanations. 1960. Due to its basis in the dynamical (state-space model) character of Algorithmic Information Theory, it encompasses statistical as well as dynamical information criteria for model selection. This is also called a theory of induction. It was introduced by Ray Solomonoff, based on probability theory and theoretical computer science 6f64deb500

The Death of the Author The essay's first English-language publication was in the American journal *Aspen*, no. 5 (1968). Barthes' essay argues against traditional literary criticism's practice of relying on the intentions and biography of an author to definitively explain the "ultimate meaning" of a text. Instead, the essay emphasizes the primacy of each individual reader's interpretation of the work over any "definitive" meaning intended by the author, a process in which subtle or unnoticed characteristics may be drawn out for new insight. The essay later appeared in an anthology of Barthes' essays, *Image-Music*. difference between his theory and New Criticism comes in the practice of "disentangling"; 5-6 in 1967; the French debut was in the magazine *Manteia*, no. The way that we use language differs from person to person. dictated language use. Communication theories have emerged from multiple historical points of Communication theory is a proposed description of communication phenomena, the relationships among them, a storyline describing these relationships, and an argument for these three elements. Theory can be seen as a way to map the world and make it navigable; communication theory gives us tools to answer empirical, conceptual, or practical communication questions 6f64deb500

As such conspiracy theories are identified as lay theories. The term generally has a negative connotation, implying that the appeal of a conspiracy theory is based in prejudice, emotional conviction, insufficient evidence, and/or paranoia. A conspiracy theory is distinct from a conspiracy; it refers to a hypothesized conspiracy with specific characteristics, including but not limited to opposition to the mainstream consensus among those who are qualified to evaluate its accuracy, such as scientists or historians 6f64deb500

Reflexivity (social theory) in prices. The complexity of this relationship can be furthered when epistemology includes religion. A reflexive relationship is multi-directional when the causes and the effects affect the reflexive agent in a layered or complex sociological relationship. In social theory, reflexivity may occur when theories in a discipline should apply equally to the discipline itself; for example, in the case In epistemology, and more specifically, the sociology of knowledge, reflexivity refers to circular relationships between cause and effect, especially as embedded in human belief structures 6f64deb500

Virtue ethics is usually contrasted with two other major approaches in ethics, consequentialism and deontology, which make the goodness of outcomes of an action (consequentialism) and the concept of moral duty (deontology) central. While virtue ethics does not necessarily deny the importance to ethics of goodness of states of affairs or of moral duties, it emphasizes virtue and sometimes other concepts, like eudaimonia, to an extent that other ethics theories do not. 6f64deb500 Military theory is multi... 6f64deb500

Military theory make any progress in examining the questions clearly and simply and expect the reader to share one's views. While military theories may employ the scientific method, theory differs from military science. Theory aims to explain the causes for military victory and produce guidance on how war should be waged and won, rather than developing universal, immutable laws which can bound the physical act of warfare or codifying empirical data, such as weapon effects, platform operating ranges, consumption rates and target information, to aid military planning. Military theory informs the political, strategic Military theory is the study of the theories which define, inform, guide and explain war and warfare. It examines war and trends in warfare beyond simply describing events in military history. Military theory analyses both normative behavioral phenomena and explanatory causal aspects to better understand war and how it is fought 6f64deb500
