Infrared seekers are passive devices, which, unlike radar, provide no indication that they are tracking a target. That makes them suitable for sneak attacks during visual encounters or over longer ranges when they are used with a forward looking infrared or similar cueing system. The system was designed to aid in sorting mail for delivery. It uses alphanumeric codes to designate geographic areas. A full postcode identifies a group of addresses (typically around 10) or a major delivery point. It consists of an outward code and an inward code. The outward code indicates the area and district, while the inward code specifies the sector and delivery point. 88956ab9ff

Directory traversal attack Some web applications attempt to prevent directory traversal by scanning the path of a request A directory traversal (or path traversal) attack exploits insufficient security validation or sanitization of user-supplied file names, such that characters representing "traverse to parent directory" are passed through to the operating system's file system API. traversal has been the cause of numerous Microsoft vulnerabilities. An affected application can be exploited to gain unauthorized access to the file system 88956ab9ff

Infrared homing Truly practical designs did not become possible until the introduction of conical scanning and miniaturized vacuum tubes during the war Infrared homing is a passive weapon guidance system which uses the infrared (IR) light emission from a target to track and follow it seamlessly. Missiles which use infrared seeking are often referred to as "heat-seekers" since infrared is radiated strongly by hot bodies. before the war ended. Many objects such as people, vehicle engines and aircraft generate and emit heat and so are especially visible in the infrared wavelengths of light compared to objects in the background 88956ab9ff

Originally, "Yahoo! Search" referred to a Yahoo!-provided interface that sent queries to a searchable index of pages supplemented with its directory of websites. The results were presented to the user under the Yahoo! brand.
