McNemar's test An application of the test in genetics is the transmission disequilibrium test for detecting linkage disequilibrium. "Generalized McNemar's Test for Homogeneity of the Marginal Distributions" (PDF). It is named after Quinn McNemar, who introduced it in 1947. SAS Global Forum. "A Test for Homogeneity of the Marginal McNemar's test is a statistical test used on paired nominal data. It is applied to 2 × 2 contingency tables with a dichotomous trait, with matched pairs of subjects, to determine whether the row and column marginal frequencies are equal (that is, whether there is "marginal homogeneity"). Stuart, Alan (1955)

Now presume two tests are performed on... Machine learning (ML) is a subfield of artificial intelligence within computer science that evolved from the study of pattern recognition and computational learning theory. In 1959, Arthur Samuel defined machine learning as a "field of study that gives computers the ability to learn without being explicitly programmed". ML involves the study and construction of algorithms that can learn from and make predictions on data. These algorithms operate by building a model from a training set of example observations to make data-driven predictions or decisions expressed as outputs, rather than following strictly static program instructions.

40bae27474 The following is a list of episodes of the programme and the sketches in each one, omitting the short "vox pops" interstitial segments between sketches.
