Film colorization The first film colorization methods were hand-done by Film colorization (American English; or colourisation/colorisation [both British English], or colourization [Canadian English and Oxford English]) is any process that adds color to black-and-white, sepia, or other monochrome moving-picture images. The first examples date from the early 20th century, but colorization has become common with the advent of digital image processing. It may be done as a special effect, to "modernize" black-and-white films, or to restore color segregation. early 20th century, but colorization has become common with the advent of digital image processing 10d4dd8159

Internet access At the retail level, many organizations, including municipal entities, also provide cost-free access to the general public. broadband communication". Archived from the original Internet access is a facility or service that provides connectivity for a

computer, a computer network, or other network device to the Internet, and for individuals or organizations to access or use applications such as email and the World Wide Web. Types of connections range from fixed-line cable (such as DSL and fiber optic) to mobile (via cellular) and satellite. Internet access is offered for sale by an international hierarchy of Internet service providers (ISPs) using various networking technologies.
