Juniperus osteosperma Juniperus osteosperma Flora of North America: Juniperus osteosperma Jepson Manual
Juniperus osteosperma Juniperus osteosperma - Photo Gallery Interactive - Juniperus osteosperma (Utah juniper;
syn. utahensis) is a shrub or small tree native to the southwestern United States. J a4c43ee2c3

This species is self-supporting with a simple form that can grow up to 10 m tall. Pittosporum crassifolium is part of the wider Pittosporaceae family, which has over 160 species in the southern hemisphere. a4c43ee2c3

Pinus jeffreyi It is mainly found in California, but also in the westernmost part of Nevada, southwestern Oregon, and northern Baja California. Wikimedia Commons has media related to: Pinus jeffreyi (category) Jepson Manual
treatment Pinus jeffreyi in the CalPhotos photo database, University of Pinus jeffreyi, also known as Jeffrey pine, Jeffrey's pine, yellow pine and black pine, is a North American pine tree. It is named in honor of its botanist documenter John Jeffrey a4c43ee2c3

Goodyera oblongifolia & A. A. 1968. Gleason New Britton and Brown Goodyera oblongifolia is a species of orchid known by the common names western rattlesnake plantain and giant rattlesnake plantain. In H. Cronquist. The Pteridophytos, Gymnospermae and Monocotyledoneae. Program (BONAP). A. J. Gleason, H. It is native to much of North America, particularly in the mountains of the western United States and Canada, from Alaska to northern Mexico, as well as in the Great Lakes region, Maine, Quebec and the Canadian Maritime Provinces. 1: 1-482 a4c43ee2c3

Clintonia borealis is commonly known as bluebead, bluebead lily, or yellow clintonia. The term "bluebead" refers to

the plant's small blue spherical fruit, perhaps its most striking feature. However, the term can be misleading since all but one of the species in genus *Clintonia* have blue fruits (notably, the fruit of *C. umbellulata* is black). Thus yellow clintonia is probably a better name for *C. borealis* since the adjective refers to the color of the plant's flower, a unique character among *Clintonia* species. Compound names such as...

Hesperocyparis bakeri Agriculture (USDA) United States Department of Agriculture plants profile Jepson Manual, University of California Farjon, A. IUCN Red *Hesperocyparis bakeri*, previously known *Cupressus bakeri*, with the common names Baker cypress, Modoc cypress, or Siskiyou cypress, is a rare species of western cypress tree endemic to a small area across far northern California and extreme southwestern Oregon, in the western United States. (2013). "Cupressus bakeri";

Juncus megacephalus America v 22 Gleason, H. A. In H. & A. New Britton and Brown *Juncus megacephalus*, the bighead rush, is a plant species native to the United States. Gleason. It is known from every seacoast state from Texas to Maryland, as well as Massachusetts, growing in freshwater marshes, sand dunes, and disturbed sites at elevations less than 100 meters (330 ft). 1968. 1: 1–482. The Pteridophyta, Gymnospermae and Monocotyledoneae. A. J. Cronquist

Pittosporum crassifolium Wellington: Government Printer. Indigenous Tracheophyta: Psilopsida, Lycopsidea, Filicopsida, Gymnospermae, Dicotyledones. I. M; Zhao *Pittosporum crassifolium*, karo, stiffleaf cheesewood, kaikaro or kihiki is a relatively fast-growing large shrub or small tree with an erect, fastigate growth habit. It is endemic to New Zealand. Li, D; Xu, Y. Vol

Eleocharis tuberculosa In H. Gleason New Britton and Brown *Eleocharis tuberculosa*, the cone-cup spikerush or large-tubercled spikerush, is a plant species native to the United States and Canada. A. It is found in wet soil in meadows, woodlands, lake shores and river banks. Cronquist. & A. J. It has been reported from every state on the Gulf and Atlantic coasts from Maine to Texas, plus Kentucky, Tennessee, Arkansas and Nova Scotia. 1: 1–482.

tuberculosa Gleason, H. The Pteridophyta, Gymnospermae and Monocotyledoneae. A. 1968

Pinus sabiniana historically more common name digger pine is still in widespread use. The name digger pine was historically used but includes a racial slur. Its vernacular names include towani pine, foothill pine, gray pine, ghost pine, and bull pine. *sabineana*) is a pine endemic to California in the United States. The Jepson Manual advises avoiding this name as the authors believe "digger" is pejorative *Pinus sabiniana* (sometimes spelled *P*

Knobcone pine Jepson Manual treatment USDA Plants Profile: *Pinus attenuata* Virginia Tech Dendrology The knobcone pine, *Pinus attenuata* (also called *Pinus tuberculata*), is a tree that grows in mild climates on poor soils. It ranges from the mountains of southern Oregon to Baja California with the greatest concentration in northern California and the Oregon-California border. ISBN 0-520-02159-2 Wikimedia Commons has media related to *Pinus attenuata*

Clintonia borealis J. 2: 93–545. In Flora of Canada. New York Botanical Garden, Bronx. The specific epithet *borealis* means "of the north," which alludes to the fact that the species tends to thrive in the boreal forests of eastern Canada and northeastern United States. (1978). Pteridophyta, Gymnospermae, Monocotyledoneae. National Museums of *Clintonia borealis* is a species of flowering plant in the lily family Liliaceae. Scoggan, H

Juncus megacephalus is a perennial herb spreading by means of underground rhizomes. Erect stems are round in cross-section, 3–4 mm (0.12–0.16 in) in diameter, up to 110 cm (43 in) tall. Leaves are up to 24 cm (9.4 in) long. Inflorescence is a panicle of up to 20 heads. Each head is spherical, about 10 mm (0.39 in) in diameter, with about 50 flowers. Flowers are straw-colored, about 20 mm (0.79 in) in diameter. *Eleocharis tuberculosa* is a perennial herb forming dense clumps. Culms are elliptical in cross-section, up to 70 cm tall. Styles of pistillate flowers have a swollen base called a tubercle, white to pale orange-brown, often with red spots, up to 2.5 mm across. *Goodyera oblongifolia* is most commonly found in mountain forests, often in the understory of

conifers. This orchid forms a patch of broad lance-shaped to oval-shaped leaves at the ground, each 4 to 9 centimeters long. The leaf is dark green and in this species the midrib is streaked with white. There is often also white netlike veining on the leaf. The plant produces an erect inflorescence up to about 30 centimeters tall. The top of the... a4c43ee2c3
