Technological unemployment Just as horses were gradually made obsolete as transport by the automobile and as labourer by the tractor, humans' jobs have also been affected throughout modern history. A contemporary example. expressed these views in a chapter called "on Machinery"; added to the third and final (1821) edition of On the Principles of Political Economy and Taxation The term technological unemployment is used to describe the loss of jobs caused by technological change. Historical examples include artisan weavers reduced to poverty after the introduction of mechanized looms (See: Luddites). Technological change typically includes the introduction of labour-saving "mechanical-muscle" machines or more efficient "mechanical-mind" processes (automation), and humans' role in these processes are minimized. It is a key type of structural unemployment. Thousands of man-years of work was performed in a matter of hours by the bombe codebreaking machine during World War II 8d47617098

The list contains 50,052 articles. --Cewbot (talk) 14:18, 26 August 2025 (UTC) 8d47617098 The second law of thermodynamics establishes the concept of entropy as a physical property of a thermodynamic system. It predicts whether processes are forbidden despite obeying the requirement of conservation of energy as expressed in the first law of thermodynamics and provides necessary criteria for spontaneous processes. For example, the first law allows the process of a cup falling off a table and breaking... 8d47617098

List of Japanese inventions and discoveries Japanese pioneers have made contributions across a number of scientific, technological and art domains. 720–726, Institute of Electrical This is a list of Japanese inventions and discoveries. 8, pp. 124 (2004) No. In particular, Japan has played a crucial role in the digital revolution since the 20th century, with many modern revolutionary and widespread technologies in fields such as electronics and robotics introduced by Japanese inventors and entrepreneurs. Second law of thermodynamics the machinery may be by remote operation over a communications network, while the electric work is supplied to the factory from the local electric grid The second law of thermodynamics is a physical law based on universal empirical observation concerning heat and energy interconversions. A simple statement of the law is that heat always flows spontaneously from hotter to colder regions of matter (or 'downhill' in terms of the temperature gradient). Another statement is: "Not all heat can be converted into work in a cyclic process. " 8d47617098
