

Freestyle Libre Flash Glucose Monitoring System

Nightscout software aims to give users access to their real time blood sugar data by putting this data in the cloud. In addition to browser-based data visualization, Nightscout can also be used to review data from a phone or smartwatch, or to remotely monitor CGM data for individuals with type 1 diabetes. Associated with Nightscout software is a broader "CGM in the Cloud" social movement, supporting individuals seeking to access and use realtime CGM data through commercial and DIY ("do it yourself") approaches. 46a6d67282 Archives 46a6d67282 The list contains 50,052 articles. --Cewbot (talk) 14:18, 26 August 2025 (UTC) 46a6d67282 2012 46a6d67282 Sep.Oct.Nov.Dec. 46a6d67282 Jan.Feb.Mar.Apr.MayJun.Jul.Aug.Sep.Oct.Nov.Dec. 46a6d67282

Ambulatory glucose profile The first version included a glucose median and inter-quartile ranges graphed as a 24-hour day. Roger Mazze and David Rodbard, with colleagues at the Albert Einstein College of Medicine in 1987, AGP was initially used for the representation of episodic self-monitored blood glucose (SMBG). Current AGP reports are now available for self monitoring blood glucose and continuous glucose monitoring devices as well as insulin pumps (tradition and Ambulatory glucose profile (AGP) is a single-page, standardized report for interpreting a patient's daily glucose and insulin patterns. Mazze brought the original AGP to the International Diabetes Center (IDC) in the late 1980s. AGP provides both graphic and quantitative characterizations of daily glucose patterns. Since then, IDC has built the AGP into the internationally recognized standard for glucose pattern
