Polygraph a person is asked and answers a series of questions. The belief underpinning the use of the polygraph is that deceptive answers will produce physiological responses that can be differentiated from those associated with non-deceptive answers; however, there are no specific physiological reactions associated with lying, making it difficult to identify factors that separate those who are lying from those who are telling the truth. The belief underpinning the use of the polygraph is that deceptive answers will produce physiological A polygraph, often incorrectly referred to as a lie detector test, is a pseudoscientific device or procedure that measures and records several physiological indicators such as blood pressure, pulse, respiration, and skin conductivity while a person is asked and answers a series of questions

Animal testing This approach can be contrasted with Animal testing, also known as animal experimentation, animal research, and in vivo testing, is the use of animals, as model organisms, in experiments that seek answers to scientific and medical questions. The focus of animal testing varies on a continuum from pure research, focusing on developing fundamental knowledge of an organism, to applied research, which may focus on answering some questions of great practical importance, such as finding a cure for. Experimental research with animals is usually conducted in universities, medical schools, pharmaceutical companies, defense establishments, and commercial facilities that provide animal-testing services to the industry. This approach can be contrasted with field studies in which animals are observed in their natural environments or habitats. testing, is the use of animals, as model organisms, in experiments that seek answers to scientific and medical questions b42bda551c
