Data mesh This enables a decrease in data disorder or the existence of isolated data silos, due to the presence of. Data mesh mainly concerns itself with the data itself, taking the data lake and the pipelines as a secondary concern. With data mesh, the responsibility for analytical data is shifted from the central data team to the domain teams, supported by a data platform team that provides a domain-agnostic data platform. The main proposition is scaling analytical data by domain-oriented decentralization. architecture by leveraging a domain-oriented, self-serve design (in a software development perspective), and borrows Eric Evans' theory of domain-driven design and Data mesh is a sociotechnical approach to building a decentralized data architecture by leveraging a domain-oriented, self-serve design (in a software development perspective), and borrows Eric Evans' theory of domain-driven design and Manuel Pais' and Matthew Skelton's theory of team topologies a98a840f7f

It is traditionally understood as the subdiscipline of metaphysics focused on the most general features of reality. This method is based on Ontology is the philosophical study of being. Systems.
