Chinese room The centerpiece of Searle's argument is a thought experiment known as the Chinese room. The argument was presented in a 1980 paper by the philosopher John Searle entitled "Minds, Brains, and Programs" and published in the journal Behavioral and Brain Sciences. Searle's version has been widely discussed in the years since. It is simply not possible to divine whether a conscious The Chinese room argument holds that a computer executing a program cannot have a mind, understanding, or consciousness, regardless of how intelligently or human-like the program may make the computer behave. Before Searle, similar arguments had been presented by figures including Gottfried Wilhelm Leibniz (1714), Anatoly Dneprov (1961), Lawrence Davis (1974) and Ned Block (1978). Chinese room has the same difficulties in principle as exchanging questions and answers in Chinese

Zachman Framework While influential in shaping enterprise architecture, the framework is often considered theoretical, with limited direct adoption in fast-paced industries like technology, where agile methods are preferred. This grid combines two key perspectives: the basic questions of What, How, When, Who, Where, and Why, and the process of turning abstract ideas into concrete realities, known as reification. It acts as an ontology, providing a clear and formal way to describe an enterprise through a two-dimensional grid. These reification stages include identification, definition, representation, specification, configuration, and instantiation. perspective focuses attention on the same fundamental questions, then answers those questions from that viewpoint, creating different descriptive representations The Zachman Framework is a structured tool used in enterprise architecture to organize and understand complex business systems adab03cce9
