Calculators

Calculator input methods employed on most general-purpose calculators. In most simple four-function calculators, such as the Windows calculator in Standard mode and those included There are various ways in which calculators interpret keystrokes. These can be categorized into two main types: 2474205e92

The Sharp PC-1600 was a pocket computer introduced by Sharp in 1986 as a successor to the PC-1500. The PC-1600 provided compatibility with its predecessor through the use of a slave CPU that could run assembly language programs targeting the older machine. Sharp PC-1600 Service Manual (PDF). Scientific notation It may be referred to as scientific form or standard index form, or standard form in the United Kingdom. The first pocket calculators supporting scientific notation appeared in 1972. To enter numbers in scientific notation calculators include a button labeled Scientific notation is a way of expressing numbers that are too large or too small to be conveniently written in decimal form, since to do so would require writing out an inconveniently long string of digits. On scientific calculators, it is usually known as "SCI" display mode. This base ten notation is commonly used by scientists, mathematicians, and engineers, in part because it can simplify certain arithmetic operations

Programmable calculator Programmable calculators are calculators that can automatically carry out a sequence of operations under the control of a stored program. Most are Turing complete, and, as such, are theoretically general-purpose computers. Most are Turing Programmable calculators are calculators that can automatically carry out a sequence of operations under the control of a stored program. However, their user interfaces and programming environments are specifically tailored to make performing small-scale numerical computations convenient, rather than

The first programmable calculators such as the IBM CPC used punched cards or other media for program storage. Hand-held electronic calculators store programs on magnetic strips, removable read-only memory cartridges, flash memory, or in battery-backed read/write memory. 2474205e92

On an expression or formula calculator, one types in an expression and then presses a key, such as "=" or "Enter", to evaluate the expression. There are various systems for typing in an expression, as described below.

On a single-step or immediate-execution calculator, the user presses a key for each operation, calculating all the intermediate results, before the final value is shown.
