Power-to-weight ratio It is also used as a measurement of performance of a vehicle as a whole, with the engine's power output being divided by the weight (or mass) of the vehicle, to give a metric that is independent of the vehicle's size. Power-to-weight ratio is a measurement of actual performance of any engine or power source. Power-to-weight is often quoted by manufacturers at the peak value, but the actual value may vary in use and variations will affect performance. powermeter or calculated from measuring incline of a road climb and the rider's time to ascend it. A locomotive generally must be heavy in order to develop Power-to-weight ratio (PWR, also called specific power, or power-to-mass ratio) is a calculation commonly applied to engines and mobile power sources to enable the comparison of one unit or design to another 5f9df0dfa6
