Inductive reasoning Inductive reasoning refers to a variety of methods of reasoning in which the conclusion of an argument is supported not with deductive certainty, but Inductive reasoning refers to a variety of methods of reasoning in which the conclusion of an argument is supported not with deductive certainty, but at best with some degree of probability. Unlike deductive reasoning (such as mathematical induction), where the conclusion is certain, given the premises are correct, inductive reasoning produces conclusions that are

at best probable, given the evidence provided fbbf9a4f88

An influential psychological theory of moral reasoning was proposed by Lawrence Kohlberg of the University of Chicago, who expanded Jean Piaget's theory of cognitive development. Lawrence described three levels of moral reasoning: pre-conventional (governed by self-interest), conventional (motivated to maintain social order, rules and laws), and post-conventional (motivated by universal ethical principles and shared ideals including the social contract). fbbf9a4f88 Distinct types of logical reasoning differ from each other concerning the norms they employ and the certainty of the conclusion they arrive at.
