Building information modeling protocols to be applied when using BIM". In 2015, many projects in the rebuilding of Christchurch were being assembled in detail on a computer using BIM Building information modeling (BIM) is an approach involving the generation and management of digital representations of the physical and functional characteristics of buildings or other physical assets and facilities. Building information models (BIMs) are computer files (often but not always in

proprietary formats and containing proprietary data) which can be extracted, exchanged or networked to support decision-making regarding a built asset. BIM software is used by individuals, businesses and government agencies who plan, design, construct, operate and maintain buildings and diverse physical infrastructures, such as water, refuse, electricity, gas, communication utilities, roads, railways, bridges, ports and tunnels. BIM is supported by various tools, processes, technologies and contracts

BMC A-series engine cylinder head, with Lucas CAV fuel injection. This engine has dry liners. It used a cast-iron block and cylinder head, and a steel crankshaft with three main bearings. The camshaft ran in the cylinder block, driven by a single-row chain for most applications, and with tappets sliding

in the block, accessible through pressed steel side covers for most applications, and with overhead valves operated through rockers. The oil pump has been removed from The Austin Motor Company A-series is a British small straight-4 automobile engine. The block is almost identical to the petrol engine. The cylinder blocks are not interchangeable between versions intended for conventional end-on mounted gearboxes and the 'in-sump' transaxle used on British Motor Corporation/British Leyland front wheel drive models such as the Mini. Launched in 1951 with the Austin A30, production lasted until 2000 in the Mini. The cylinder head for the overhead-valve version of the A-series 1fa6082f81
