No further edits should be made to this page. e4756d35b4

N1 (rocket) The N1 was the Soviet counterpart to the US Saturn V and was intended to enable

crewed travel to the Moon and beyond, with studies beginning as early as 1959. However, each of the four attempts to launch an N1 failed in flight, with the second attempt resulting in the vehicle crashing back onto its launch pad shortly after liftoff. The N1 (from Ракета-носитель *Raketa-nositel*, "Carrier Rocket"; Cyrillic: Н1) was a super heavy-lift launch vehicle intended to deliver payloads beyond low Earth orbit. Adverse characteristics of the large cluster of thirty engines and its complex fuel and oxidizer feeder systems were not revealed earlier. Its first stage, Block A, was the most powerful rocket stage ever flown for over 50 years, with the record standing until Starship's first integrated flight test

Soviet space program Contrary to its competitors (NASA in the United States, the European Space Agency in Western Europe, and the Ministry of Aerospace Industry in China), which had their programs run under single coordinating agencies, the Soviet space program was divided between several internally competing design bureaus led by Korolev, Kerimov, Keldysh, Yangel, Glushko, Chelomey, Makeyev, Chertok and Reshetnev. development of the flawed super heavy N1, in the hope that the Americans would have a setback, leaving enough time to make the N1 workable and land a man on the Moon. The Soviet space program (Russian: Космическая программа СССР, romanized: *Kosmicheskaya programma SSSR*) was the state space program of the Soviet Union, active from 1951 until the dissolution of the Soviet Union in 1991. The Soviet space program served as an important marker of claims by the Soviet Union to its superpower. Several of these bureaus were subordinated to the Ministry of General Machine-Building
