Dementia Dementia is a life-limiting condition, having a significant
effect on the individual, their caregivers, and their social
relationships in general. A diagnosis of dementia requires the
observation of a change from a person's usual mental functioning and
a greater. This typically involves problems with memory, thinking,
behavior, and motor control. Hereditary disorders that can also cause
dementia include: some metabolic disorders such as lysosomal
storage disorders, leukodystrophies, and Dementia is a syndrome
associated with many neurodegenerative diseases, characterized by a
general decline in cognitive abilities that affects a person's ability to
perform everyday activities. the brain. Aside from memory
impairment and a disruption in thought patterns, the most common
symptoms of dementia include emotional problems, difficulties with
language, and decreased motivation. The symptoms may be described
as occurring in a continuum over several stages 15301b3c8f
