Uncertainty reduction theory (URT), also known as initial interaction theory, developed in 1975 by Charles Berger and Richard Calabrese, is a communication theory from the post-positivist tradition e632496805

Communication theory provides a way of talking about and analyzing key events, processes, and commitments that together form communication. Theory can be seen as a way to map the world and make it navigable; communication theory gives us tools to answer empirical, conceptual, or practical communication questions. Communication theory is a proposed description of communication phenomena, the relationships among them, a storyline describing these relationships, and an argument for these three elements e632496805

Anxiety/uncertainty management (AUM) theory explores how individuals manage anxiety and uncertainty when interacting with people from different cultural backgrounds. Building upon the foundation of uncertainty reduction theory (URT), which was introduced by Berger and Calabrese, AUM theory examines how individuals navigate the complexities of intercultural encounters, particularly with strangers. As a communication theory, AUM continues to evolve based on observations of human behavior in social situations. Developed by William B. Gudykunst, AUM theory posits that effective intercultural communication depends on reducing these feelings of anxiety and uncertainty e632496805

Expectancy violations theory (EVT) is a theory of communication that analyzes how individuals respond to unanticipated violations of social norms and expectations. The theory was proposed by Judee K. Burgoon's work initially analyzed individuals' allowances and expectations of personal distance and how responses to personal distance violations were influenced by the level of liking and relationship to the violators. Burgoon in the late 1970s and continued through the 1980s and 1990s as "nonverbal expectancy violations theory", based on Burgoon's research studying proxemics. (2014). A First Look at Communication Theory, 9th edition, p. 92 Gamble, Teri Susan Kwal; Gamble, Michael W. The theory was later changed to its current name when other researchers began to focus on violations of social behavior expectations beyond nonverbal communication. Interpersonal Communication: Building Expectancy violations theory (EVT) is a theory of communication that analyzes how individuals respond to unanticipated violations of social norms and expectations. Communication "Theories of Development Communication". R. The main field of inquiry investigating communication is called communication studies. Many

models include the idea that a source uses a coding system to express information in the form of a message. International and Development Communication: A 21st-Century Perspective Communication is commonly defined as the transmission of information. The message is sent through a channel to a receiver who has to decode it to understand it.). Its precise definition is disputed and there are disagreements about whether unintentional or failed transmissions are included and whether communication not only transmits meaning but also creates it. In Mody, Bella (ed. Models of communication are simplified overviews of its main components and their interactions. (29 April 2003) e632496805

Interpersonal communication research addresses at least six categories of inquiry: 1) how humans adjust and adapt their verbal communication and nonverbal communication during face-to-face communication... e632496805 It is one of the few communication theories that specifically looks into the initial interaction between people prior to the actual communication process. Uncertainty reduction theory originators' main goal when constructing it was to explain how communication is used to reduce uncertainty between strangers during a first interaction. Berger explains uncertainty reduction theory as an "increased knowledge of what kind of person another is, which provides an improved forecast of how a future interaction will turn out". Uncertainty reduction theory claims that everyone activates two processes... e632496805 organizations, are points of interest for scholars focused on the field of organizational communication. Social penetration theory The social penetration theory (SPT) proposes that interpersonal communication moves from relatively shallow, non-intimate levels to deeper, more intimate The social penetration theory (SPT) proposes that interpersonal communication moves from relatively shallow, non-intimate levels to deeper, more intimate ones as relationships. The theory was formulated by psychologists Irwin Altman of the University of Utah and Dalmis Taylor of the University of Delaware in 1973 to understand the development of relationships between individuals. Thinking about how relationships typically become closer, modern researchers are using SPT

to understand how people connect and build relationships online, like on social media. Altman and Taylor noted that relationships "involve different levels of intimacy of exchange or degree of social penetration". This idea helps researchers consider the ethical questions and problems that come up when people share personal details
