The Machairodontinae contain many of the extinct predators commonly known as "saber-toothed cats", including those with greatly elongated upper maxillary canines, such as the famed genus Smilodon and Megantereon, though the degree of elongation was variable, and in some machairodontines like Dinofelis the length of the upper canines was much more modest. Sometimes, other carnivorous mammals with elongated teeth are also called saber-toothed cats, although they do not belong to the felids. Besides the machairodonts, other saber-toothed predators included gorgonopsians, nimravids, machaeroidines, and thylacosmilids.
