Water Yellowstone National Park: U. It is the main constituent of Earth's hydrosphere and the fluids of all known living organisms in which it acts as a solvent. National Park Service. Water, being a polar molecule, undergoes strong intermolecular hydrogen bonding which is a large contributor to its physical and chemical properties. S. It is vital for all known forms of life, despite not providing food energy or being an organic micronutrient. Archived from the original on 2 March 2020 Water is an inorganic compound with the chemical formula H₂O. Due to its presence in all organisms, its chemical stability, its worldwide abundance and its strong polarity relative to its small molecular size; water is often referred to as the "universal solvent". It is a transparent, tasteless, odorless, and nearly colorless chemical substance. "Yellowstone Lesson Plan: How Yellowstone Geysers Erupt" d775cc74fd

Machine learning Honglak Lee, Roger Machine learning (ML) is a field of study in artificial intelligence concerned with the development and study of statistical algorithms that can learn from data and generalise to unseen data, and thus perform tasks without explicit instructions. Artificial intelligence: a modern approach. Within a subdiscipline in machine learning, advances in the field of deep learning have allowed neural networks, a class of statistical algorithms, to surpass many previous machine learning approaches in performance.). The history of medicine is the study and documentation of the evolution of medical treatments, practices, and knowledge over time. Medical historians often draw from other humanities fields of study including economics, health sciences, sociology, and politics to better understand the institutions, practices, people, professions, and social systems that have shaped medicine. When a period which predates or lacks written sources regarding medicine, information is instead drawn from archaeological sources. This field tracks the evolution of human societies' approach to health... d775cc74fd

These interventions are designed to help individuals with special needs achieve a higher level of personal self-sufficiency and success in school and in their community, which may not be available if the student were only given access to a typical classroom education. This involves the individually planned and systematically monitored arrangement of teaching procedures, adapted equipment and materials, and accessible settings. , SDC, and SPED) is the practice of educating students in a way that accommodates their individual differences, disabilities, and special needs. John Stuart Mill One of the most influential thinkers in the history of liberalism and social liberalism, he contributed widely to social theory, political theory, and political economy. Dubbed "the most influential English-speaking philosopher of the nineteenth century" by the Stanford Encyclopedia of Philosophy, he conceived of liberty as justifying the freedom of the individual in opposition to unlimited state and social control. He advocated political and social reforms such as proportional representation, the emancipation of women, and the development of labour organisations and farm cooperatives. comptes rendus of his daily economy lessons helped his father in writing Elements of Political Economy in 1821, a textbook to promote the ideas of Ricardian John Stuart Mill (20 May 1806 – 7 May 1873) was an English philosopher, political economist, politician and civil servant d775cc74fd

Big History It integrates studies of the cosmos, Earth, life, and humanity using empirical evidence to explore cause-and-effect relations. It examines long time frames using a multidisciplinary approach based on combining numerous disciplines from science and the humanities. It is taught at universities as well as primary and secondary schools often using web-based interactive presentations. It draws on the latest findings from biology, astronomy, geoscience, chemistry, physics, archaeology, anthropology, psychology, sociology, economics Big History is an academic discipline that examines history from the Big Bang to the present. Big History resists specialization and searches for universal patterns or trends. It explores human existence in the context of this bigger picture d775cc74fd
