Some postcranial bones have been attributed to "C." acer but they have more recently been suggested to belong to the related species "C." affinis. Although they were first placed in the genus *Crocodylus*, "C." acer and "C." affinis are not crown crocodiles. Recent studies place them as early members of *Crocodyloidea*, only distantly related to *Crocodylus*. Although it represents a distinct genus, a generic name has not yet been proposed for "C." acer.
