History of evolutionary thought hypotheses for the origin of eukaryotes". Naturalists began to focus on the variability of species; the emergence of palaeontology with the concept of extinction further undermined static views of nature. ; Johnson, Patricia Evolutionary thought, the recognition that species change over time and the perceived understanding of how such processes work, has roots in antiquity. In the early 19th century prior to Darwinism, Jean-Baptiste Lamarck proposed. ; Brown, Mark T. 29 (1): 74-84. Dyall, Sabrina D. 1002/bies. 20516. doi:10. BioEssays. PMID 17187354. With the beginnings of modern biological taxonomy in the late 17th century, two opposed ideas influenced Western biological thinking: essentialism, the belief that every species has essential characteristics that are unalterable, a concept which had developed from medieval Aristotelian metaphysics, and that fit well with natural theology; and the development of the new anti-Aristotelian approach to science 2759840995

Infections can be caused by a wide range of pathogens, most prominently bacteria and viruses. Hosts can fight infections using their immune systems. Mammalian hosts react to infections with an innate response, often involving inflammation, followed by an adaptive response. 2759840995 To accommodate smoother penetration of the vagina during sexual intercourse or other sexual activity, vaginal moisture increases during sexual arousal in human females and other female mammals. This increase in moisture provides vaginal lubrication, which reduces friction. The texture of the vaginal walls creates... 2759840995

Metabolism These Metabolism (, from Greek: μεταβολή metabolē, "change") refers to the set of life-sustaining chemical reactions that occur within organisms. The three main functions of metabolism are: converting the energy in food into a usable form for cellular processes; converting food to building blocks of macromolecules (biopolymers) such as proteins, lipids, nucleic acids, and some carbohydrates; and eliminating metabolic wastes. These enzyme-catalyzed reactions allow organisms to grow, reproduce, maintain their structures, and respond to their environments. The word metabolism can also refer to all chemical reactions that occur in living organisms, including digestion and the transportation of substances into and between different cells. In a broader sense, the set of reactions occurring within the cells. greatly aided by the development of new techniques such as chromatography, NMR spectroscopy, electron microscopy and molecular dynamics simulations 2759840995

Individuals with anorexia nervosa have a fear of being overweight or being seen as such, despite the fact that they are typically underweight. The DSM-5 describes this perceptual symptom as "disturbance in the way in which one's body weight or shape is experienced". In research and clinical settings, this symptom is called "body image disturbance" or body dysmorphia. Individuals with anorexia nervosa also often deny that they have a problem with low weight due to their altered perception of appearance. They may weigh themselves frequently, eat small amounts, and only eat certain foods. Some... 2759840995 Antibiotics for bacterial infections. 2759840995

Sexuality in ancient Rome 115-116, citing Festus (87 in the edition of Müller) on the torch and noting that priestesses devoted to Ceres in North Sexual attitudes and behaviors in ancient Rome are indicated by art, literature, and inscriptions, and to a lesser extent by archaeological remains such as erotic artifacts and architecture. It has sometimes been assumed that "unlimited sexual license" was characteristic of ancient Rome, but sexuality was not excluded as a concern of the *mos maiorum*, the traditional social norms that affected public, private, and military life. Pudor, "shame, modesty", was a regulating factor in behavior, as were legal strictures on certain sexual transgressions in both the Republican and Imperial periods.
