Human-computer interaction
These include visual, auditory, and
tactile (haptic) feedback systems,
which serve as channels for
interaction in both traditional
interfaces and mobile computing
contexts. HCI researchers observe
the ways humans interact with
computers and design technologies
that allow humans to interact with
computers in novel ways. Research
in HCI covers the design and the
use of computer technology, which
focuses on the interfaces between
people (users) and computers.
computer technology, which
