

Chapter 12 Study Guide

Chemistry Stoichiometry

Answer Key

Ozone "Chapter 2". Graham Ozone (), also called trioxygen, is an inorganic molecule with the chemical formula O₃. Ozonation in Organic Chemistry. 2. It is an allotrope of oxygen that is much less stable than the diatomic allotrope O₂, breaking down in the lower atmosphere to O₂ (dioxygen). Bailey, P. Solomons, T. (1982). S. Ozone is formed from dioxygen by the action of ultraviolet (UV) light and electrical discharges within the Earth's atmosphere. It is present in very low concentrations throughout the atmosphere, with its highest concentration high in the ozone layer of the stratosphere, which absorbs most of the Sun's ultraviolet (UV) radiation. W. It is a pale-blue gas with a distinctively pungent odor. Vol. ISBN 978-0-12-073102-2. New York, NY: Academic Press 691dc5e6ae

Plutonium was first synthesized and isolated in late 1940 and early 1941, by deuteron bombardment of uranium-238 in the 1.5-metre (60 in) cyclotron at the University of California, Berkeley. First, neptunium-238 (half-life... 691dc5e6ae 31 August 2010[edit] 691dc5e6ae Because of its strong antimicrobial properties, the related compounds sodium hypochlorite (NaOCl) and calcium hypochlorite (Ca(OCl)₂) are ingredients in many commercial bleaches, deodorants, and disinfectants. The white blood cells of mammals, such as humans, also contain hypochlorous acid as a tool against foreign bodies. In living organisms... 691dc5e6ae

Hypochlorous acid Stoichiometry and NMR analysis" 78 (1): 55–64. HClO cannot be isolated from these solutions due to rapid equilibration with its precursor, chlorine. Chemistry and Physics of Lipids. Its structure is H–O–Cl. liposomes in dependence on the content of double bonds. It is an acid that forms when chlorine dissolves in water, and itself partially dissociates, forming a hypochlorite anion, ClO[–]. 1016/0009-3084(95)02484-Z
Hypochlorous acid is an inorganic compound with the chemical formula ClOH, also written as HClO, HOCl, or ClHO. HClO and ClO[–] are oxidizers, and the primary disinfection agents of chlorine solutions. doi:10 691dc5e6ae

Plutonium It reacts with carbon, halogens, nitrogen, silicon, and hydrogen. When exposed to moist air, it forms oxides and hydrides that can expand the sample up to 70% in volume, which in turn flake off as a powder that is pyrophoric. It is a silvery-gray actinide metal that tarnishes when exposed to air, and forms a dull coating when oxidized. The element normally exhibits six allotropes and four oxidation states. It is radioactive and can accumulate in bones, which makes the handling of plutonium dangerous. generally believed that the color is a function of chemical purity, stoichiometry, particle size, and method of preparation, although the color resulting Plutonium is a chemical element; it has symbol

Intelligent tutoring system It has been used to explore a variety An intelligent tutoring system (ITS) is a computer system that imitates human tutors and aims to provide immediate and customized instruction or feedback to learners, usually without requiring intervention from a human teacher. There are many examples of ITSs being used in both formal education and professional settings in which they have demonstrated their capabilities and limitations. An ITS typically aims to replicate the demonstrated benefits of one-to-one, personalized tutoring, in contexts. ITSs have the common goal of enabling learning in a meaningful and effective manner by using a variety of computing technologies. There is a close relationship between intelligent tutoring, cognitive learning theories and design; and there is ongoing research to improve the effectiveness of ITS. that helps high school students learn chemistry, specifically the sub-area of chemistry known as stoichiometry 691dc5e6ae
