

Lecture Notes Environmental Impact Assessment

IPCC Fourth Assessment Report The report is the largest and most detailed summary of the climate change situation ever undertaken, produced by thousands of authors, editors, and reviewers from dozens of countries, citing over 6,000 peer-reviewed scientific studies. An analysis of statements on projected regional impacts in the 2007 report. Contributors to AR4 included more than 2,500 scientific expert reviewers, more than 800 contributing. People from over 130 countries contributed to the IPCC Fourth Assessment Report, which took six years to produce. IPCC assessment. A report by the Netherlands Environmental Assessment Agency Climate Change 2007, the Fourth Assessment Report (AR4) of the United Nations Intergovernmental Panel on Climate Change (IPCC), was published in 2007 and is the fourth in a series of reports intended to assess scientific, technical and socio-economic information concerning climate change, its potential effects, and options for adaptation and mitigation f6460acf1e

An exploit was demonstrated in August 2017 that revealed the emails of Gridcoin users and allowed the theft of other users work. The research team disclosed the vulnerability to the developers in September 2016, and the patch for the vulnerability was released in March 2017 with version 3.5.8.7, however... f6460acf1e

Environmental protection in the field of environmental policy, issuing directives such as those on environmental impact assessment and on access to environmental information for Environmental protection, or environment protection, refers to the taking of measures to protecting the natural environment, prevent pollution and maintain ecological balance. Action may be taken by individuals, advocacy groups and governments. Objectives include the conservation of the existing natural environment and natural resources and, when possible, repair of damage and reversal of harmful trends f6460acf1e

Timeline of history of environmentalism Cordoba, Al-Andalus, had waste containers This timeline of the history of environmentalism is a listing of events that have shaped humanity's perspective on the environment. This timeline includes human induced disasters, environmentalists that have had a positive influence, and environmental legislation. soil contamination, municipal solid waste mishandling, and environmental impact assessments of certain localities f6460acf1e

Gridcoin was created on October 16, 2013, by Rob Halförd. Initially using the energy-intensive proof of work, as used by Bitcoin, Gridcoin migrated to a proof of stake protocol in 2014, similar to Peercoin, in an attempt to address the environmental impact of cryptocurrency mining. f6460acf1e

Integrated assessment modelling www. "Inaugural lecture Detlef van Vuuren: Integrated Assessment: Back to the Future PBL Netherlands Environmental Assessment Agency". While the detail and extent of integrated disciplines varies strongly per model, all climatic integrated assessment modelling includes economic processes as well as processes producing greenhouse gases. pbl. ISBN 978-1-61205-561-9. The goal of integrated assessment modelling is to accommodate informed policy-making, usually in the context of climate change though also in other areas of human and social development. nl - Integrated assessment modelling (IAM) or integrated modelling (IM) is a term used for a type of scientific modelling that tries to link main features of society and economy with the biosphere and atmosphere into one modelling framework. Other integrated assessment models also integrate other aspects of human development such as education, health, infrastructure, and governance f6460acf1e

Life-cycle assessment Life cycle assessment (LCA), also known as life cycle analysis, is a methodology for assessing the impacts associated with all the stages of the life Life cycle assessment (LCA), also known as life cycle analysis, is a methodology for assessing the impacts associated with all the stages of the life cycle of a commercial product, process, or service. For instance, in the case of a manufactured product, environmental impacts are assessed from raw material extraction and processing (cradle), through the product's manufacture, distribution and use, to the recycling or final disposal of the materials composing it (grave) f6460acf1e

For a list of geological and climatological events that have shaped human history see Timeline of environmental history and List of years in the environment. f6460acf1e

Environmental impact of recreational diving It is not uncommon for highly trafficked dive destinations to have more adverse effects with visible signs of diving's negative impacts due in large part to divers who have not been trained to sufficient competence in the skills required for the local environment, an inadequate pre-dive orientation, or lack of a basic understanding of biodiversity and the delicate balance of aquatic ecosystems. There may also be indirect positive effects as the environment is recognised by the local communities to be worth more in good condition than degraded by inappropriate use, and conservation efforts get support. The environmental impact of recreational diving is the effects of recreational scuba diving on the underwater environment, which is largely the effects The environmental impact of recreational diving is the effects of recreational scuba diving on the underwater environment, which is largely the effects of diving tourism on the marine environment f6460acf1e

Economic analysis of climate change For example, in a cost-benefit analysis, the trade offs between climate change impacts, adaptation, and mitigation are made explicit. “Environmental impact assessment for climate change policy with the simulation-based integrated assessment model E3ME-FTT-GENIE” An economic analysis of climate change uses economic tools and models to calculate the magnitude and distribution of damages caused by climate change. For this kind of analysis, integrated assessment models (IAMs) are useful. In general, they increase the more the global surface temperature increases. Unnada, Unnada (2018). Those models link main features of society and economy with the biosphere and atmosphere into one modelling framework. It can also give guidance for the best policies for mitigation and adaptation to climate change from an economic perspective. There are many economic models and frameworks. The total economic impacts from climate change are difficult to estimate

These models are integrated... Details around the economic dimension of sustainability are controversial. Scholars have discussed this under the concept of weak and strong sustainability. For example, there will always be tension between... An LCA study involves a thorough inventory of the energy and materials that are required across the supply chain and value chain of a product, process or service, and calculates the corresponding emissions to the environment. LCA thus assesses cumulative potential environmental impacts. The aim is to document and improve the...

Criticism of the IPCC Fourth Assessment Report The overwhelming majority view of scientists with expertise in climate change is that errors, when found, are corrected, and the issues as identified do not undermine the conclusions of the report that the climate system is warming in response to increased levels of greenhouse gases, largely due to human activities. There has been considerable political controversy over a small number of errors found in the report, and there have been calls for review of the process used to formulate the report. change 2007: Impacts, adaptation and vulnerability) a mistake has entered the text that was supplied by the Netherlands Environmental Assessment Agency, regarding The IPCC Fourth Assessment Report (AR4) is a report on climate change created with the help of a large number of contributors, both scientists and governmental representatives

Gridcoin An exploit was demonstrated in August 2017 Gridcoin (abbreviation: GRC) is a cryptocurrency which rewards volunteer computing performed on the BOINC network. protocol in 2014, similar to Peercoin, in an attempt to address the environmental impact of cryptocurrency mining. BOINC was originally developed to support SETI@home, but has also been used for research in other areas

Due to the pressures of overconsumption, population growth and technology, the biophysical environment is being degraded, sometimes permanently. This has been recognized, and governments have begun placing restraints on activities that cause environmental degradation. Since the 1960s, environmental movements have created more awareness of the multiple environmental problems. There is disagreement...

Sustainability UNESCO distinguishes the two like this: "Sustainability is often thought of as a long-term goal (i. The idea of sustainability can guide decisions at the global, national, organizational, and individual levels. e. output even while growing the economy. A related concept is that of sustainable development, and the terms are often used to mean the same thing. ". This decoupling reduces the environmental impact of economic growth, such as pollution. This can include addressing key environmental problems, including climate change and biodiversity loss. Doing this is difficult. Some Many definitions emphasize the environmental dimension. a more sustainable world), while sustainable development refers to the many processes and pathways to achieve it
