Quantum neural network artificial neural networks. One important motivation for these investigations is the difficulty to train classical neural networks, especially in big data applications. Quantum neural networks refer to three different categories: Quantum computer with classical Quantum neural networks are computational neural network models which are based on the principles of quantum mechanics. However, typical research in quantum neural networks involves combining classical artificial neural network models (which are widely used in machine learning for the important task of pattern recognition) with the advantages of quantum information in order to develop more efficient algorithms. The hope is that features. The first ideas on quantum neural computation were published independently in 1995 by Subhash Kak and Ron Chrisley,

engaging with the theory of quantum mind, which posits that quantum effects play a role in cognitive function. This is discussed in a lower section 1e36ec0055
