United Nations geoscheme It was devised by the United Nations Statistics Division (UNSD) based on the M49 coding classification. The creators note that "the assignment of countries or areas to specific groupings is for statistical convenience and does not imply any assumption regarding political or other affiliation of countries or territories". It was devised by the United Nations Statistics Division (UNSD) based on the M49 coding classification. The creators note that The United Nations geoscheme is a system that divides 248 countries and territories in the world into six continental regions, 22 geographical subregions, and two intermediary regions. two intermediary regions

A national census was conducted in 1999, although the results were never released. A new census was undertaken in 2009, but turned out to be controversial, as the questions about ethnic affiliation seemed inappropriate after the ethnic violence of the previous year. Preliminary results of the census were published in 2010. Botswana, like many nations in southern Africa, suffers from a high HIV infection rate, estimated among adults ages 15 to 49 to be 20.7%.

United Nations Statistical Commission Its 24 member states are elected by the Economic and Social The United Nations Statistical Commission (StatCom) is a Functional Commission of the United Nations Economic and Social Council, established in 1946. Statistical Commission oversees the work of the United Nations Statistics Division (UNSD). Member states are usually represented by their chief statistician. In 2024, the Economic and Social Council decided to progressively increase the number of members in the Commission from 24 to 54 until 2028, which aims to enhance representation and inclusivity. Its 24 member states are elected by the Economic and Social Council on the basis of the following geographical distribution: African states (5), Asian States (4), Eastern European States (4), Latin American and Caribbean States (4), Western European and other States (7). The Statistical Commission oversees the work of the United Nations Statistics Division (UNSD). Since 2000 the Commission

The goal has five targets to be achieved by 2030. Progress towards the targets is measured by six indicators. Three out of the five targets are outcome targets: Universal access to modern energy; increase global percentage of renewable energy; double the improvement in energy efficiency. The remaining two targets are means of implementation targets: to promote access to research, technology and investments in clean... Kosovo and Taiwan (listed as Taiwan Province of China) have... Kenya's population was reported as 47.6 million during the 2019 census compared to 38.6 million inhabitants 2009, 30.7 million in 1999, 21.4 million in 1989, and 15.3 million in 1979. This was an increase of a factor of 2.5 over 30 years, or an average growth rate of more than 3 percent... The UNSD geoscheme was created for statistical analysis and consists of macro-geographical regions arranged to the extent possible according to continents. Within each region, smaller geographical subregions and sometimes intermediary regions contain countries and territories. Countries and territories...

Sustainable Development Goal 7 " Access to energy is an important pillar for the wellbeing of the people as well as for economic development and poverty alleviation. It aims to "Ensure access to affordable, reliable, sustainable and modern energy for all. International Renewable Energy Agency (IRENA) United Nations Statistics Division (UNSD) World Bank (WB) World Health Organization (WHO) Sustainable Energy Sustainable Development Goal 7 (SDG 7 or Global Goal 7) is one of 17 Sustainable Development Goals established by the United Nations General Assembly in 2015 820f1a0ba3
