solutions. These solutions are believed to contain free electrons. Indeed, the alkali metals provide the best example of group trends in properties in the periodic table, with elements exhibiting well-characterised homologous behaviour. All alkali metals have their outermost electron in an s-orbital: this shared electron configuration results in their having very similar characteristic properties. $\text{Na} + x\text{NH}_3 \rightarrow \text{Na}^+ + e(\text{NH}_3)_x^-$ Due to the The alkali metals consist of the chemical elements lithium (Li), sodium (Na), potassium (K), rubidium (Rb), caesium (Cs), and francium (Fr). Together with hydrogen they constitute group 1, which lies in the s-block of the periodic table. This family of elements is also known as the lithium family after its leading element 64e7a64953

Automation The benefit of automation includes labor savings, reducing waste, savings in electricity costs, savings in material costs, and improvements to quality, accuracy, and precision. Automation has been achieved by various means including mechanical, hydraulic, pneumatic, electrical, electronic devices, and computers, usually in combination. Complicated systems, such as modern factories, airplanes, and ships typically use combinations of all of these techniques. Data extraction and document synthesis / reporting Contract management Natural language search Customer, employee, and stakeholder onboarding Manual activities Automation describes a wide range of

technologies that reduce human intervention in processes, mainly by predetermining decision criteria, subprocess relationships, and related actions, as well as embodying those predeterminations in machines 64e7a64953
