MikroTik was established in 1996 by founders John Tully and Arnis Riekstiņš in Riga, Latvia, developing networking software for x86 PC hardware that would develop into a product called RouterOS. The earliest versions of RouterOS were based on Linux 2.2. The ping utility only computes the final round-trip times from the destination point, while route-tracing utilities can show more detail, such as the round-trip times of the packets received from each successive host (remote node) along the route to a destination and the sum of the mean times in each hop as a measure of the total time spent to establish the connection.

GPIB The Linux kernel got support for GPIB with version 6. It subsequently became the subject of several standards. 60488-2, Part 2: Codes, Formats, Protocols and Common Commands, replaces IEEE 488. Although the bus was originally created to connect together automated test equipment, it also had some success as a peripheral bus for early microcomputers, notably the Commodore PET. 19, after General Purpose Interface Bus (GPIB) or Hewlett-Packard Interface Bus (HP-IB) is a short-range digital communications 8-bit parallel multi-master interface bus specification originally developed by Hewlett-Packard and standardized in IEEE 488. Newer standards have largely replaced IEEE 488 for computer use, but it is still used by test equipment. 2/IEC 60625-2. 1-2003

History of operating systems The growing complexity of hardware and application programs eventually made operating systems a necessity for everyday use. served as a crude command-line interface, allowing the user to load a separate disk operating system to perform file management commands and load and save Computer operating systems (OSes) provide a set of functions needed and used by most application programs on a computer, and the links needed to control and synchronize computer hardware. On the first computers, with no operating system, every program needed the full hardware specification to run correctly and perform standard tasks, and its own drivers for peripheral devices like printers and punched paper card readers 7bcf99458f

Google announced the project in July 2009, initially describing it as an operating system where applications and user data would reside in the cloud. ChromeOS was used primarily to run web applications. The operating system first shipped with Chromebooks in 2011. It is also offered since 2020 as an installable Linux distribution as ChromeOS Flex. 7bcf99458f == History == 7bcf99458f In 2022, with a value of €1.30 billion, Mikrotik was the 4th largest company in Latvia and the first private company to surpass €1 billion value in Latvia. 7bcf99458f A command is available in many modern operating systems, generally named traceroute in Unix-like systems such as FreeBSD, macOS, and Linux and named tracert in Windows and ReactOS. 7bcf99458f In 2025, Google announced that ChromeOS would merge with their mobile Android operating system as part of a new project which uses the Android system instead of the old "vanilla" Linux kernel based on Gentoo. 7bcf99458f == General == 7bcf99458f In the 1960s, Hewlett-Packard (HP) manufactured various automated test and measurement instruments, such as digital multimeters and logic analyzers.
