Simultaneous game Given a continuous game, players will have different information sets if the game is simultaneous than if it is sequential because they have less information to act on at each step in the game. In other words, both players normally act at the same time in a simultaneous game. Simultaneous games contrast with sequential games, which are played by the players taking turns (moves alternate between players). Even if the players do not act at the same time, both players are uninformed of each other's move while making their decisions. Normal form representations are usually used for simultaneous games. Sequential game Simultaneous action selection Pepall, Lynne, 1952- (2014-01-28). For example, in a two player continuous.
